Visible from all directions

IO-Link compatible Sensor Models in Lineup

M8 / M12 / M18 / M30 Threaded Type
PNP Output, Normally Open Type
* Switchable to Normally Closed Type

Standard type cylindrical inductive proximity sensors with improved basic performance
GX-300 series

Improved basic performance

Response frequency of 5 kHz* allows the use of high-speed application

* In the case of **GX-303S**

The GX-303S boasts a response frequency of 5 kHz and realizes high speed response.
The response frequency of other sensor models has been also improved by up to 4 times as compared to our conventional models.
Since the GX-300 series responds quickly to sensor ON/OFF judgement, it works well with a high-speed application and contributes to the reduction of equipment cycle time.

Typical examples (Shielded type)

| Type	Response frequency of our conventional model	Significant improvement over conventional models!	Response frequency of GX-300 standard sensing range type
ø3 mm ø0.118 in	—		**5 kHz** (GX-303S)
ø4 mm ø0.157 in * Conventional model: ø3.8 / ø4.4 mm ø0.150 / ø0.173 in	1 kHz	4 times	**4 kHz** (GX-304S)
ø5.4 mm ø0.213 in	1.5 kHz	2.7 times	**4 kHz** (GX-305S)
M5 threaded	1 kHz	4 times	**4 kHz** (GX-305M)
M8 threaded	1 kHz	2 times	2 kHz (GX-308M)
M12 threaded	450 Hz	3.3 times	1,500 Hz (GX-312M)
M18 threaded	300 Hz	2 times	600 Hz (GX-318M)
What is response frequency?

A rotating plate having the standard sensing object pasted at constant intervals is placed in front of the proximity sensor. The plate is rotated while observing the sensing output. The maximum number of times per second at which sensing can be done, for which the corresponding sensing output can be obtained, is the maximum response frequency.

In other words, the larger the numeric value of the response frequency is, the faster the response is.
Example) Conversion of response frequency to response speed

    1 kHz → 1-ms cycle   5 kHz → 0.2-ms cycle

a: Side length of standard sensing object
Enhanced a degree of the detection margin

Sensing over long distance

The M8 / M12 / M18 / M30 threaded type sensors are available in standard sensing range type or long sensing range type ("K" at the end of model No.).
The long sensing range means reliable detection with plenty of performance margin to spare.

Sensing range comparison

M30 threaded type, shielded type

Conventional model: **10** mm **0.394 in**
Standard sensing range type: **10** mm **0.394 in**
Long sensing range type: **15** mm **0.591 in**

M30 threaded type, non-shielded type

Conventional model: **22** mm **0.866 in**
Standard sensing range type: **18** mm **0.709 in**
Long sensing range type: **30** mm **1.181 in**

Minimum risk of collision or sensing error even if the distance to the sensing object changes due to equipment vibration

If the distance to the sensing object changes due to equipment vibration or time-related degradation, the sensor may generate sensing errors including sensing failure in some cases.
If the sensor is set up very close to the sensing object for the purpose of preventing detecting failures, the sensor may contact the sensing object and cause damage.

The long sensing range models facilitate the sensor setup for reliable sensing since they detect the sensing object at a long distance.

Positioning processing equipment

Dog
GX-308MK
Conventional model

The distance to the dog becomes longer due to equipment vibration and the sensor may fail to detect the sensing object.

Conventional model

1 mm **0.039 in**
Maximum operation distance

Sensing error
GX-300

The long sensing range model can perform sensing over long distance to ensure stable detection.

GX-308MK

2 mm **0.079 in**
Maximum operation distance

Stable detection
Reduced variation in maximum operation distance

With the GX-300 series, variation in maximum operation distance is kept within ±10%
* ±15% in the case of the previous GX series.
Variation in the maximum operation distance of the ø3 / ø4 / ø5.4 mm **ø0.118 / ø0.157 / ø0.213 in**, M5 / M8 threaded type models has been also reduced as compared to the conventional models.

Improved usability

Indicator visible 360 degrees

The indicator is conveniently visible from any direction, thus facilitating installation check and operation confirmation.

Conventional model	GX-300
If the operation indicator position is adjusted to make the indicator visible, the sensor distance changes.	In the small-diameter type sensors, the indicator light is visible at 4 locations. In the M8 and larger threaded type sensors, the high-brightness indicator and the resin containing dispersing agent allow the confirmation of the indicator from any angle to facilitate the cumbersome adjustment of installation position.

Indicator visible only at 1 location

GX series

GX-N series

Indicator light visible at 4 locations
Small-diameter type

Indicator visible from any direction

M8 / M12 / M18 / M30 threaded type
* The operation indicator flashes in green during I/O-Link communication.

Further reduction of the size of small-diameter type sensors for easier embedment

The small-diameter type sensors are 25.1 mm 0.988 in in depth while the conventional models measured 30 mm 1.181 in.
(**GX-303S** measures 27.1 mm 1.067 in in depth.)
The reduced unit size enables the installation of the sensor in a smaller space.

M5 thread	30 mm 1.181 in Threaded section: 18 mm 0.709 in	25.1 mm 0.988 in Threaded section: 15.1 mm 0.594 in

Extensive model lineup

The GX-300 series includes 310 different sensor models.
We offer various types of sensor models such as the cable type (cable length: 2 m 6.562 ft or 5 m 16.404 ft), connector type and pigtailed type. Furthermore, we can supply bending-resistant cable type models (cable length: 2 m 6.562 ft or 5 m 16.404 ft), which are suitable for installation on moving parts.
(For the detail of our model lineup, see page 6 and following pages.)

| Cable type	Connector type	Pigtailed type

Suitable for IoT applications

IO-Link compatibility

Evolution from ON/OFF judgment sensors to sensors capable of transmitting the detection level and sensor status information

* Only the M8 / M12 / M18 / M30 threaded type, PNP output, normally open type models are compatible with IO-Link.

◆ **IO-Link compatible sensors can also be used as ordinary sensors (PNP output type).**

GX-312M-A-P

[+]
[−]
Tr output

Transmission of ON/OFF signal to host device such as PLC

ON
OFF
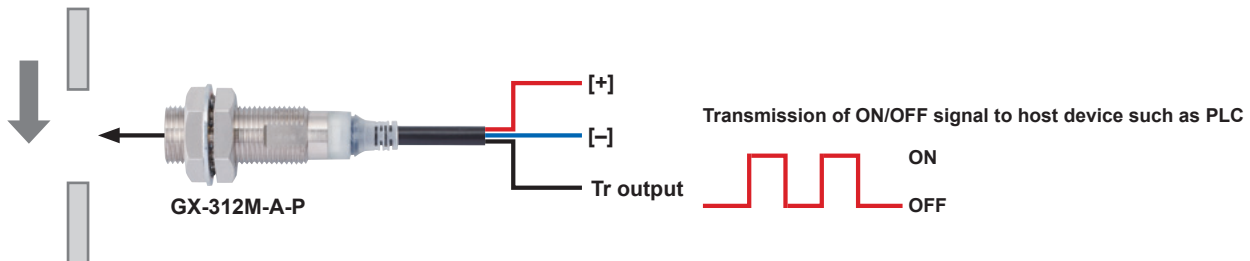

◆ **When IO-Link compatible sensors are connected to the IO-Link master, they can transmit not only ON/OFF signal but also sensor level information and operation mode switching information in both ways. So, the sensors can be utilized for the visualization of manufacturing operations or for the incorporation of IoT technology.**

IO-Link usage example 2

The IO-Link device has an IODD (IO Device Description) file containing identification information such as the device vendor's name and model number. Workers on the manufacturing floor can load and utilize this information.

IO-Link usage example 1

Using the process data, the sensor transmits the detection level (8 bits) to the host device over IO-Link.

ON/OFF signal + Sensor information

Wire disconnection

Operation mode switching information

N.O.

N.C.

IO-Link usage example 3

When wire breakage or short-circuit occurs, the sensor notifies the host device by using the IO-Link event notification function. This enables quick identification of malfunctioning part to ensure smooth maintenance.

IO-Link usage example 4

The operation mode can be toggled between N.O. and N.C. using IO-Link communication.

ORDER GUIDE

5 m 16.404 ft cable length type

5 m 16.404 ft cable length type (standard: 2 m 6.562 ft) is also available. When ordering this type, suffix "-C5" to the model No.
(e.g.) 5 m 16.404 ft cable length type of **GX-303S-A-N** is "**GX-303S-A-N-C5**".

Bending-resistant cable type (2 m 6.562 ft / 5 m 16.404 ft cable length)

The shielded, non-threaded type sensors (ø4 mm ø0.157 in / ø5.4 mm ø0.213 in) and threaded type sensors (M5 / M8) are available with a bending-resistant cable (cable length: 2 m 6.562 ft or 5 m 16.404 ft). (Note that the ø5.4 mm ø0.213 in size, normally closed type sensors are not available with a 5-m-long bending-resistant cable.)
When ordering bending-resistant 2 m 6.562 ft cable type, suffix "-R" to the model No. When ordering bending-resistant 5 m 16.404 ft cable type, suffix "-R5" to the model No.
(e.g.) Bending-resistant 2 m 6.562 ft cable type of **GX-304S-A-N** is "**GX-304S-A-N-R**".
(e.g.) Bending-resistant 5 m 16.404 ft cable type of **GX-304S-A-N** is "**GX-304S-A-N-R5**".

Pigtailed type

The threaded type sensors (M8 / M12 / M18 / M30) are available in the pigtailed type. (Connector: M12)
When ordering this type, suffix "-J" to the model No.
(e.g.) Pigtailed type of **GX-308M-A-N** is "**GX-308M-A-N-J**".

Connector type

The threaded type sensors (M12 / M18 / M30) are available in the connector type. When ordering this type, suffix "-Z" to the model No.
(e.g.) Connector type of **GX-312M-A-N** is "**GX-312M-A-N-Z**".

	Voltage withstandability		500 V AC for one min. between all supply terminals connected together and enclosure			
	Insulation resistance		50 MΩ or more, with 500 V DC megger between all supply terminals connected together and enclosure			
	Vibration resistance		10 to 55 Hz frequency, 1.5 mm 0.059 in double amplitude in X, Y and Z directions for two hours each			
	Shock resistance		500 m/s^2 acceleration in X, Y and Z directions ten times each			
Sensing range variation	Temperature characteristics		Within ±15 % of sensing range at +23 °C +73 °F in ambient temperature range			
	Voltage characteristics		Within ±2.5 % for ±15 % fluctuation of the rated supply voltage			
Material			Enclosure: Stainless steel (SUS303) [Brass (Nickel plated) for **GX-305S**] Sensing part: Heat-resistant ABS, Cable: Polyvinyl chloride (PVC)			
Mating cable			0.09 mm^2 3-core ø2.4 mm ø0.094 in cabtyre cable, 2 m 6.562 ft long	0.14 mm^2 3-core ø2.9 mm ø0.114 in cabtyre cable, 2 m 6.562 ft long (Note 8)		
Weight (Note 6)			Net weight: 20 g approx. Gross weight: 40 g approx.	Net weight: 25 g approx. Gross weight: 50 g approx.	Net weight: 30 g approx. Gross weight: 50 g approx.	
Accessories			—			Nut: 2 pcs., Toothed lock washer: 1 pc.

Notes: 1) Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of +23 °C +73 °F.
2) The sensors with "**N**" indicated instead of □ in their model Nos. are NPN output type. The sensors with "**P**" are PNP output type.
3) The maximum operation distance stands for the maximum distance for which the sensor can detect the standard sensing object.
The stable sensing range stands for the sensing range for which the sensor can stably detect the standard sensing object even if there is an ambient temperature drift and/or supply voltage fluctuation.
4) When used at a power of 12 V, the product is less susceptible to the effects of internal self-heat generation and therefore a more stable repeat accuracy can be obtained.
5) When the output is 20 mA or less, the product is less susceptible to the effects of internal self-heat generation and therefore a more stable repeat accuracy can be obtained.
6) When the cable length is 2 m 6.562 ft.
7) The response frequency is an average value.
8) The bending-resistant cable type models come with a 0.15 mm^2 3-core bending-resistant ø2.9 mm ø0.114 in cabtyre cable.

■ SENSING CHARACTERISTICS (TYPICAL)

GX-303S-□

Correlation between sensing object size and sensing range
As the sensing object size becomes smaller than the standard size (iron sheet 3 × 3 × t 1 mm 0.118 × 0.118 × t 0.039 in), the sensing range shortens as shown in the left figure.
Correlation between sensing range and repeatability
GX-304S-□   GX-305M-□

Correlation between sensing object size and sensing range
As the sensing object size becomes smaller than the standard size (iron sheet 4 × 4 × t 1 mm 0.157 × 0.157 in × t 0.039 in), the sensing range shortens as shown in the left figure.

Correlation between sensing range and repeatability
GX-305S-□

Correlation between sensing object size and sensing range
As the sensing object size becomes smaller than the standard size (iron sheet 5.4 × 5.4 × t 1 mm 0.213 × 0.213 × t 0.039 in), the sensing range shortens as shown in the left figure.

Correlation between sensing range and repeatability
SENSING CHARACTERISTICS (TYPICAL)

GX-308M-□

Correlation between sensing object size and sensing range

As the sensing object size becomes smaller than the standard size (iron sheet 8 × 8 × t 1 mm 0.315 × 0.315 × t 0.039 in), the sensing range shortens as shown in the left figure.

Correlation between monitor output and sensing range
GX-312M-□

**Correlation between sensing object size and sensing range**
As the sensing object size becomes smaller than the standard size (iron sheet 12 × 12 × t 1 mm 0.472 × 0.472 × t 0.039 in), the sensing range shortens as shown in the left figure.

Correlation between monitor output and sensing range
GX-318M-□

**Correlation between sensing object size and sensing range**
As the sensing object size becomes smaller than the standard size (iron sheet 18 × 18 × t 1 mm 0.709 × 0.709 × t 0.039 in), the sensing range shortens as shown in the left figure.

**Correlation between monitor output and sensing range**

GX-330M-□

Correlation between sensing object size and sensing range

As the sensing object size becomes smaller than the standard size (iron sheet 30 × 30 × t 1 mm 1.181 × 1.181 × t 0.039 in), the sensing range shortens as shown in the left figure.

**Correlation between monitor output and sensing range**

GX-300

SENSING CHARACTERISTICS (TYPICAL)

GX-308MK-□

Correlation between sensing object size and sensing range
As the sensing object size becomes smaller than the standard size (iron sheet 8 × 8 × t 1 mm 0.315 × 0.315 × t 0.039 in), the sensing range shortens as shown in the left figure.

Correlation between monitor output and sensing range

GX-312MK-□

Correlation between sensing object size and sensing range
As the sensing object size becomes smaller than the standard size (iron sheet 12 × 12 × t 1 mm 0.472 × 0.472 × t 0.039 in), the sensing range shortens as shown in the left figure.

Correlation between monitor output and sensing range

GX-318MK-□

Correlation between sensing object size and sensing range

As the sensing object size becomes smaller than the standard size (iron sheet 24 × 24 × t 1 mm 0.945 × 0.945 × t 0.039 in), the sensing range shortens as shown in the left figure.

Correlation between monitor output and sensing range

GX-330MK-□

Correlation between sensing object size and sensing range

As the sensing object size becomes smaller than the standard size (iron sheet 45 × 45 × t 1 mm 1.772 × 1.772 × t 0.039 in), the sensing range shortens as shown in the left figure.

Correlation between monitor output and sensing range

GX-308ML-□

**Correlation between sensing object size and sensing range**

As the sensing object size becomes smaller than the standard size (iron sheet 8 × 8 × t 1 mm 0.315 × 0.315 × t 0.039 in), the sensing range shortens as shown in the left figure.

Correlation between monitor output and sensing range

GX-312ML-□

**Correlation between sensing object size and sensing range**

As the sensing object size becomes smaller than the standard size (iron sheet 15 × 15 × t 1 mm 0.591 × 0.591 × t 0.039 in), the sensing range shortens as shown in the left figure.

**Correlation between monitor output and sensing range**

GX-318ML-□

Correlation between sensing object size and sensing range

As the sensing object size becomes smaller than the standard size (iron sheet 30 × 30 × t 1 mm 1.181 × 1.181 × t 0.039 in), the sensing range shortens as shown in the left figure.

Correlation between monitor output and sensing range

GX-330ML-□

Correlation between sensing object size and sensing range

As the sensing object size becomes smaller than the standard size (iron sheet 54 × 54 × t 1 mm 2.126 × 2.126 × t 0.039 in), the sensing range shortens as shown in the left figure.

Correlation between monitor output and sensing range

GX-300

## ■ SENSING CHARACTERISTICS (TYPICAL)

GX-308MLK-□

**Correlation between sensing object size and sensing range**

As the sensing object size becomes smaller than the standard size (iron sheet 12 × 12 × t 1 mm 0.472 × 0.472 × t 0.039 in), the sensing range shortens as shown in the left figure.

Correlation between monitor output and sensing range

GX-312MLK-□

Correlation between sensing object size and sensing range

As the sensing object size becomes smaller than the standard size (iron sheet 24 × 24 × t 1 mm 0.945 × 0.945 × t 0.039 in), the sensing range shortens as shown in the left figure.

**Correlation between monitor output and sensing range**

GX-318MLK-□

Correlation between sensing object size and sensing range

As the sensing object size becomes smaller than the standard size (iron sheet 48 × 48 × t 1 mm 1.890 × 1.890 × t 0.039 in), the sensing range shortens as shown in the left figure.

Correlation between monitor output and sensing range

GX-330MLK-□

**Correlation between sensing object size and sensing range**

As the sensing object size becomes smaller than the standard size (iron sheet 90 × 90 × t 1 mm 3.543 × 3.543 × t 0.039 in), the sensing range shortens as shown in the left figure.

Correlation between monitor output and sensing range

■ PRECAUTIONS FOR PROPER USE

• This catalog is a guide to select a suitable product. Be sure to read instruction manual attached to the product prior to its use.

⚠️ • Never use this product as a sensing device for personnel protection.
• In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.
Mounting

• The tightening torque should be under the value given below.

Installation using set screw

• Do not tighten the product mounting nuts with excessive force.

\<Non-threaded type\>

Set screw (M3), cup point
(Set screw is not provided with the product. It must be arranged by the customer.)

Model No.	Tightening torque	Set screw location A (mm in)
GX-303S	0.2 N·m	13 to 21 0.512 to 0.827
GX-304S		8 to 21 0.315 to 0.827
GX-305S	0.4 N·m	

Installation using nut

• Do not tighten the nut with excessive force. Be sure to install the toothed locked washer.
• In the case of the M8 threaded type, the allowable strength differs depending on the distance from the tip of the head. The following table shows the allowable tightening strengths for section B and section C shown in the diagram. (Section B starts from the tip of the head and its dimension is indicated in the table. Section C includes the nut on the head side. Therefore, if the nut extends into section B even slightly, the strength of section B is applicable.)
• The following allowable tightening strengths are applicable when the washer is installed.

⟨Shielded type, threaded type⟩   ⟨Non-shielded type, threaded type⟩

Installing small-diameter sensor

• Please use the sensor after confirming the installation distance by following (a) and (b) with an actual detection object when you install.
  (a) The detection distance receives the influence by the material of the detection object, thickness, shape, and the size. So, the detection object is brought close to the front side of the sensor and detection distance (S) is measured. For the effect of the material, see the graph, "Correlation between sensing object size and sensing range," (p.16).
  (b) Please decide installation distance (Sa) with S × 70% or less after measuring sensing distance(S).
• Please install the sensor to come within the range of (Sa) when the detection object moves from vertical direction.
• Please install the sensor to pass within the range of (Sa) when the detection object moves from horizontal direction.
• When using the sensor, refer to the "Standard sensing object" specified in the specifications (p.10) and the graph, "Correlation between sensing object size and sensing range," (p.16).

Sa = S × 0.7
■ PRECAUTIONS FOR PROPER USE

Distance from surrounding metal

• As metal around the sensor may affect the sensing performance, pay attention to the following points.

Influence of surrounding metal

• The surrounding metal will affect the sensing performance. Keep the minimum distance specified in the table below.
• When mounting the sensor using a nut, use the nut and washer provided with the product.
• The type of the provided nut varies in different models. See the external dimensions diagrams (p.23~) for the detail of the shape.

Mounting method A (Using the provided nut)

Mounting method B (Embedded in the metal)

Timing chart

Operation Mode	N.O. / N.C.	Indicator
Standard I/O mode (SIO) (Note 1)	N.O.	ON/OFF Communication indicator (Green); ON/OFF Operation indicator (Orange); ON/OFF OUT
	N.C.	ON/OFF Communication indicator (Green); ON/OFF Operation indicator (Orange); ON/OFF OUT
IO-Link communication mode (COM) (Note 2)	N.O.	Flashing (1 sec cycle) Communication indicator (Green); ON/OFF Operation indicator (Orange); ON/OFF OUT
	N.C.	Flashing (1 sec cycle) Communication indicator (Green); ON/OFF Operation indicator (Orange); ON/OFF OUT

Notes: 1) When sensors that are not compatible with IO-Link are used or when IO-Link compatible models are used as ordinary sensors, they operate in the standard I/O mode (SIO mode).
2) The operation mode can be changed by the IO-Link communications. The timer function of the output can be set up by the IO-Link communications.

PRECAUTIONS FOR PROPER USE

Others

- This product has been developed / produced for industrial use only.
- Do not install the product in the following locations. Doing so may result in product failure or malfunction.
  - Outdoor locations directly subject to sunlight, rain, snow, water droplets, or oil.
  - Locations subject to atmospheres with chemical vapors, in particular solvents and acids.
 - Locations subject to corrosive gases.
- The product may malfunction if used near ultrasonic cleaning equipment, high-frequency equipment, transceivers, cellular phones, inverters, or other devices that generate a high-frequency electric field.
- Laying the product wiring in the same conduit or duct as high-voltage wires or power lines may result in incorrect operation and damage due to induction. Wire the product using a separate conduit or independent conduit.
- The following conditions shall be observed if you use the product under an environment using cutting oil that may affect product's life and/or performance.
  - Usage in oil or water is prohibited.
- Impact on the product life may differ depending on the oil you use. Before using the cutting oil, make sure that it should not cause deterioration or degradation of sealing components.
- Never use thinner or other solvents. Otherwise, the product surface may be dissolved.
- When turning ON the power by influence of temperature environment, an output mis-pulse sometimes occurs. After the product has passed for 300 ms after turning ON, please use in the stable state. If the sensing object is located near the sensor's sensing surface, an output mis-pulse may be generated for 300 ms or longer at the time of power-on. Be sure to check the product for proper operation under actual operating condition before using.

- The product is adjusted with a high degree of accuracy, so do not use in the environment with sudden temperature change.
- Do not attempt to disassemble, repair, or modify the product.
- Do not use a voltage that exceeds the rated operating voltage range. Applying a voltage that is higher than the operating voltage range may result in damage or burnout.
- Be sure that the power supply polarity and other wiring is correct. Incorrect wiring may cause explosion or burnout.
- If the power supply is connected directly without a load, the internal elements may explode or burn. Be sure to insert a load when connecting the power supply.
- Please use gloves to protect yourself from injury caused by screw.
- For the connector type and pigtailed type, check the specifications of the connector cable to be used. Please do not use it under conditions that exceed the range of its specifications of both the product and the connector cable.
- Please make sure there is no foreign matter in connector part before connecting the connector cable to the connector type and pigtailed type.
- In the IO-Link mode, the cable between the IO-Link master and sensor must have a length of 20 m 65.617 ft or less.
