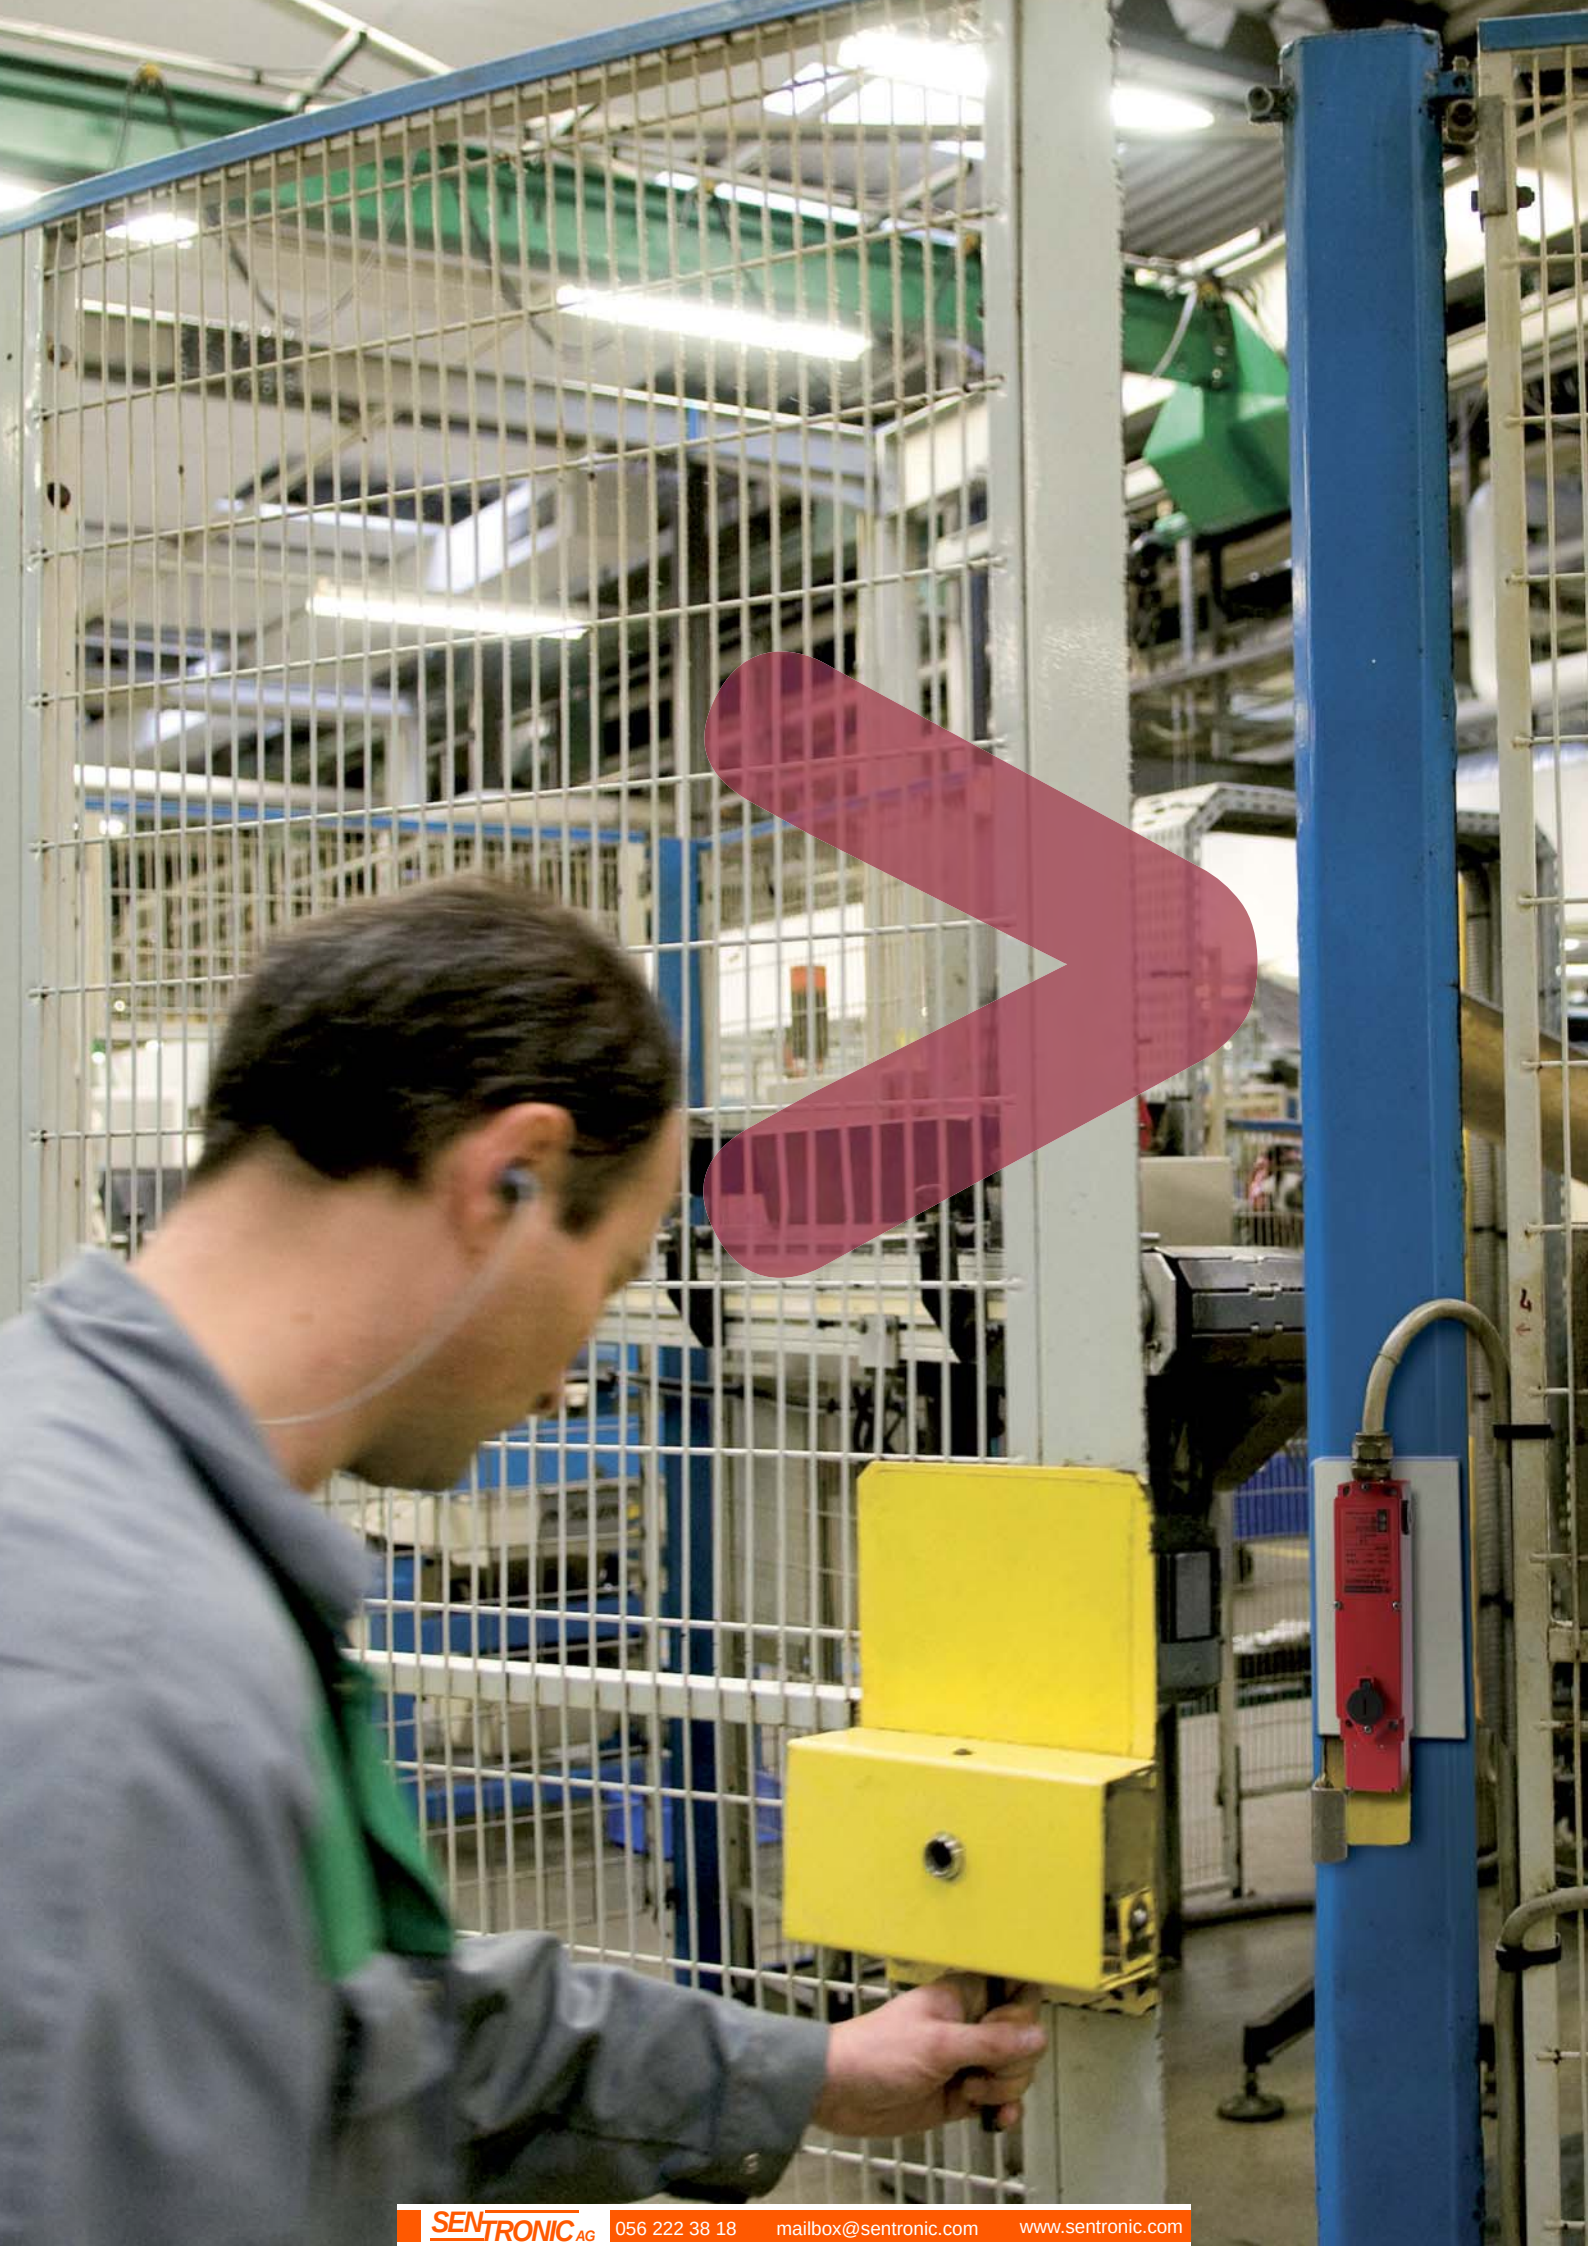
Safety switches Preventa XCS

Catalogue

Telemecanique Sensors



Appropriate safety

Ingenious and innovative, Preventa safety solutions assure you of maximum protection with the XCS range of dedicated switches for controlling the safe opening and interlocking of guards and covers in your installations.

>A complete range for all applications:

- For a wide range of machinery guards, covers and doors
- For all types of environments
- A solution tailored to the levels of safety required

>A Schneider Electric package offer:

- Sensors designed to be integrated into Preventa safety solutions
- Present in over 190 countries and 5000 sales outlets, Schneider Electric assures you of an offer available worldwide through its network of distributors

Contents

Make the most of your energy

>Appropriate solutions

The latest operating safety standards propose new methods of risk management right from the design stage, making use of concepts such as Safety Integrity Levels (SIL) and Performance Levels (PL).
Schneider Electric safety solutions enable you to optimise the cost of your installations according to the level of safety required, while assuring you of perfect interoperability.

Used with Preventa modules, controllers or safety PLCs and TeSys motor starter solutions, XCS safety switches offer levels of access protection up to PLe, category 4, SIL3, according to standards requirements in force EN ISO 13849-1 and EN/IEC 62061.

>Preventa XCS guides your choice

Whatever your activity sector, your type of machine or your automated function, Schneider Electric offers you a complete range of safety switches to meet your protection requirements for functional safety.

Safety detection solutions
Key operated switches

Refer to standards EN/ISO 12100 and EN/ISO 14119

Removable or movable protective guards for potentially dangerous machine functions must be used in conjunction with locking or interlocking devices.
Application requiring an interlocking device: high inertia (long rundown time) machines.
An interlocking device must be used when the rundown time is greater than the time it takes for a person to reach the danger zone.
This device ensures that the guard remains locked until the potentially dangerous movement has stopped.

Safety interlock switches

The safety interlock switches, specifically designed for machine guarding applications, provide an ideal solution for the locking or interlocking of movable guards associated with industrial machinery. They meet the requirements of standards EN/ISO 12100, IEC/ISO 13852, EN/ISO 14119 and EN/IEC 60204-1.
They contribute to the protection of operators working on potentially dangerous machines by breaking the start control circuit of the machine when a protective guard is opened or removed, using **positive opening operation contacts**, thus stopping the dangerous movement of the machine.
The removal/opening of the guard (after the dangerous movement has stopped) can either be:
- at the time the machine is switched-off for low inertia machines (machines where the rundown time is less than the time it takes for the operator to access the hazardous zone), or
- delayed for high inertia machines (machines where the rundown time is greater than the time it takes for the operator to access the hazardous zone).

Control circuit categories

The safety interlock switch if used in conjunction with a Preventa safety module enables designers to achieve PL=e, category 4 control systems with reference to EN/ISO 13849-1 and SIL CL3 with conforming to EN/IEC 62061. When used on their own or combined with another switch, they can achieve up to category 1, 2 or 3 control circuit.
Safety related parts of control systems should be developed taking into account the results of an appropriate Risk Assessment.

Safety of personnel

The start command for the machine can only be initiated following correct operation of the safety interlock switch.
On its release, the NC safety contacts are opened by **positive action** or, for coded magnetic switches, change state (**must be monitored using a Preventa safety module)**.

Safety of operation

The safety interlock switches incorporate slow break or snap action contacts with **positive opening operation** (except for coded magnetic switches where this is not possible). For mechanical safety interlock switches, on closing of the guard the actuator fitted to it enters the head of the switch, operates the multiple interlock device and closes the NC contacts. For coded magnetic switches, the presence of the magnet causes the contacts to change state.

Safety in use

All safety interlock switches are designed to accept a few millimetres of misalignment between the actuator and the switch in order to compensate for mechanical play, vibration, etc.

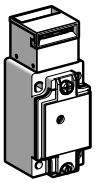
Design to minimise defeat

Both mechanically and magnetically actuated safety interlock switches are designed to be operated by specific actuators so that they cannot be defeated in a simple manner using common tools, rods, metal plates, simple magnets, etc. When loosening the fixing screws for re-orientation of the turret head on safety interlock switches, the head itself remains attached to the switch body and the contact states remain unchanged.
All safety interlock switches and safety limit switches are designed to avoid any adjusments in the head setting, removing the key actuator or to access the safety contacts without using the appropriate tool.
There are various methods for obtaining a higher level of tamper proofing, for example:
- using a cage device to prevent the insertion of a spare actuator or magnet, or any other foreign body,
- fixing the actuator or coded magnet to the guard by means that make it very difficult to remove (riveting or welding).

Safety detection solutions
Key operated switches

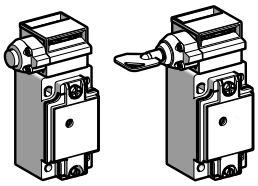
Metal key operated switches case

Without locking of actuator



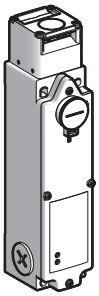
Metal key operated switches case for use on machines **with low inertia** and operating in **normal conditions** (no vibration or shock and guard mounted vertically, without risk of rebound on closing), thus eliminating unintentional opening of the guard.

With locking of actuator and manual unlocking



Metal key operated switches case for use on heavy machines **with low inertia** and operating in **arduous conditions** (shock or vibration exist), whereby the guard could open unintentionally.
A key operated lock or a pushbutton enables the positive locking of the guard and its subsequent unlocking.

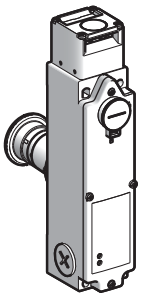
With interlocking and locking of actuator by solenoid



Metal safety interlock switches case for use on machines **with high inertia** or with a controlled opening of the protective guard.
The locking of the moving guard can either be on de-energisation or energisation of the solenoid.
A key operated lock enables manual unlocking of the guard in the event of an interlocking circuit malfunction, and also provides extra safety for maintenance personnel likely to be working on the machine.
The switches incorporate 2 LEDs: one indicating guard “open/closed” and the other, guard “locked/unlocked”.

Metal safety interlock switches case, mushroom head pushbutton for escape release on XCSLF

With interlocking and locking of actuator by solenoid



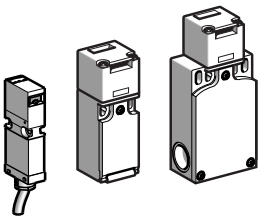
Safety interlock switches type XCSLF are available with a mushroom head pushbutton mounted on the rear of the switch for unlocking the machine guard whilst being held in the locked position by the solenoid.
This manual unlocking using the mushroom head pushbutton for escape release is useful in the following cases:
- whilst the machine or a group of machines is undergoing maintenance, enabling operation at reduced speed or whilst stopped with the guard(s) closed.

The safety of maintenance personnel is thus improved in the event of:
- a power failure,
- an interlocking circuit malfunction,
- personnel finding themselves in a dangerous situation.

Unlocking using the escape release mushroom head pushbutton takes priority over any other action. It therefore enables a person to leave the zone if the need arises.
The re-initialisation of this function is performed by turning (with or without key) the escape release mushroom head.

Plastic case guard switches with mechanical actuator

Without locking of actuator



Plastic safety interlock switches case for use on light machines **with low inertia**.
For use in arduous conditions (shock or vibration exist, guard not vertical or risk of rebound on closing) where the guard could open unintentionally, a **guard retaining device (XCSPA or XCSTA)** is available as an accessory.

With interlocking and locking of actuator by solenoid

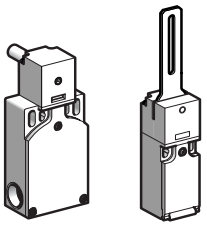
Plastic safety interlock switches case for use on machines **with high inertia** or with a controlled opening of the protective guard.
The locking of the moving guard can either be on de-energisation or energisation of the solenoid.
A special tool enables manual unlocking of the guard in the event of an interlocking circuit malfunction, and also provides extra safety for maintenance personnel likely to be working on the machine.

Safety detection solutions

Lever or spindle operated switches, safety limit switches and coded magnetic systems

Rotary lever and spindle operated switches for hinged guards

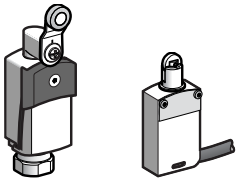
With head for rotary movement (lever or spindle)



Plastic case guard switches with straight or elbowed operating lever or spindle operator.
Specifically designed for small industrial machines fitted with small sized **hinged doors, covers or protective guards**.
They protect the operator by immediately stopping the dangerous movement of the machine as soon as the rotary lever or spindle displacement reaches an angle of 5°.

Safety limit switches

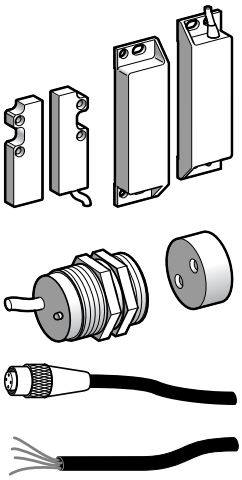
With head for linear movement (plunger) or rotary movement (lever)



Metal or plastic case limit switches.
For use on machines with low inertia and also on machines with high inertia, when used in conjunction with actuator operated guard switches, for monitoring access doors and/or guards. When used on their own, they are always installed in “positive mode” or combined in pairs, with one switch being in “positive mode” and the other in “negative mode”.

Coded magnetic switches

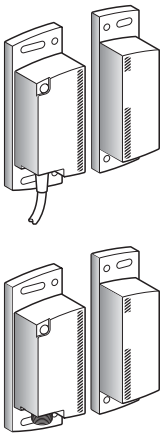
With an associated coded magnet



Plastic case guard switches for use on machines with low inertia.
Specifically designed for industrial machines fitted with **doors, covers or guards with imprecise guiding**.
They are ideally suited for machines subjected to frequent washing or liquid spray.
They protect the operator by immediately stopping any dangerous movement, as soon as the distance between the switch and its magnet is greater than 8 or 5 mm, depending on the switch model.

Coded magnetic systems

With dedicated transmitter

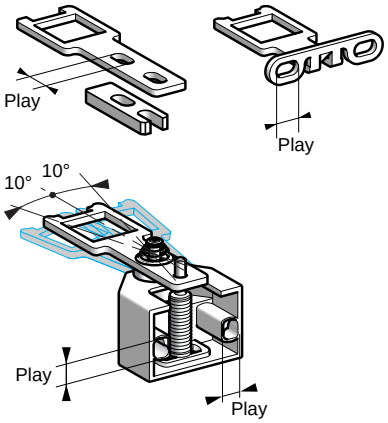


These self-contained SIL 2/category 3, PL=d or SIL 3/ category 4, PL=e systems protect the operator by immediately stopping any dangerous movement, as soon as the distance between the transmitter and the receiver exceeds 10 mm.
Plastic case system for use on machines with low inertia.
Specifically designed for industrial machines fitted with one or more doors, covers or guards with imprecise guiding.
They are ideally suited for machines subjected to frequent washing or liquid spray and that are not necessarily equipped with an enclosure or control cabinet.

Safety detection solutions
Metal case key operated switches

Key actuators

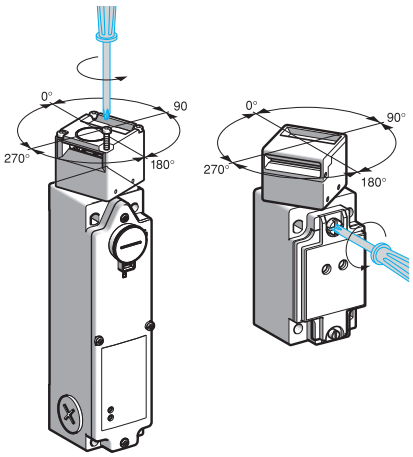
The key actuators are common to all metal and plastic safety interlock switches case types XCSLF and XCSLE



Their oblong fixing holes enable simple adjustment when mounting on moving guards.
A pivoting actuator (both horizontally and vertically) is available when using safety interlock switches in conjunction with hinged guards or guards with imprecise guiding.
Straight actuators are supplied with an adaptor shank for simple replacement of an **XCSL** safety interlock switch by an **XCS** switch, without the need to drill additional fixing holes for the switch or the key actuator.

Turret head

All metal safety interlock switches case are fitted with a square turret head which can be rotated through 360° in 90° steps

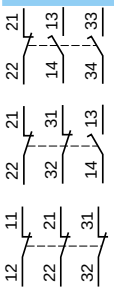


8 directions of actuation are possible for the actuator:
- 4 in the horizontal plane
- 4 from above the switch (4 alternative positions of the actuator slot, depending on the orientation of the head).

When loosening the fixing screw for re-orientation of the operating head, the head itself remains attached to the body and the contact states remain unchanged.

Safety contacts

Metal safety interlock switches case incorporate a **3-pole contact block** with positive opening operation, which is actuated by insertion or withdrawal of the actuator attached to the guard.



The withdrawal of the key actuator opens the NC safety contact(s), even in the event of the contact sticking or welding.
The 3-pole contact block enables redundant safety circuits to be established (for example: NC + NC or NC + NO) and also, to provide signalling (for example: PLC, illuminated beacon, etc.).

LED indicators

An orange LED (optional for key operated switches type XCSA, XCSB and XCSC, standard for safety interlock switches type XCSLF and XCSLE) **indicates the position of the machine guard**:

LED illuminated: actuator not inserted in head of switch, NC contact(s) open, guard open.

LED not illuminated: actuator inserted in head of switch, NC contact(s) closed, guard closed.

A green LED (incorporated on safety interlock switches type XCSLF and XCSLE) **indicates the locking of the machine guard**:

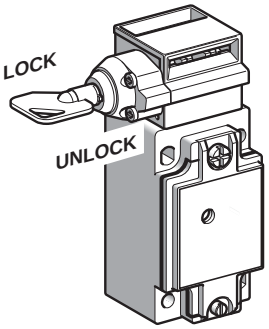
LED not illuminated: actuator not inserted in head of switch.
The machine cannot be operated.

LED illuminated: actuator inserted in head of switch **and actuator locked**. The machine is either ready for starting, running or decelerating to a standstill.

***Note**: LED wiring must be done according to schematics indicated in the instruction sheet or in the catalogue pages.*

Manual locking/unlocking by pushbutton or key operated lock on XCSB and XCSC

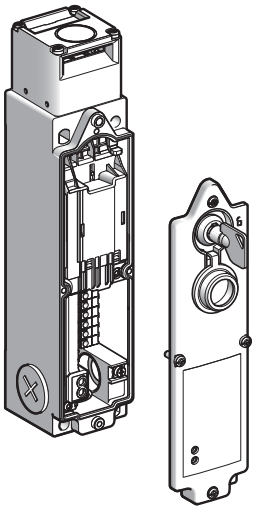
The pushbutton or key operated lock fitted to key operated switches type XCSB and XCSC allows manual locking/unlocking of the machine guard



Their use is not necessary for the normal operation of the guard switch.
For ease of access, the pushbutton or lock may be mounted on the right or the left of the key operated switch head.
For key operated switches type XCSC, when the machine guard is locked (key in position “LOCK”), the resistance to forcible withdrawal of the actuator fitted to the guard is **150 daN**.
The key is removable from the locking device in the “LOCK” position.

Locking/unlocking by solenoid on XCSLF

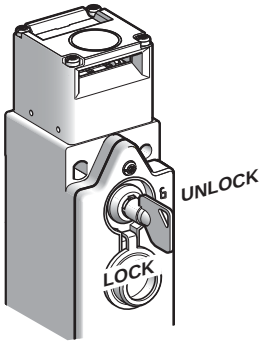
Safety interlock switches type XCSLF incorporate a solenoid for locking/ unlocking of the machine guard



With the machine guard closed and locked, the resistance to forcible withdrawal of the actuator fitted to the guard is **Fzh 2300 N** according to the verification principle GS-ET19 (Fzh=Fmax/1.3).
In addition to the 3-pole contacts, positively operated by the actuator fitted to the guard, safety interlock switches XCSLF incorporate **NC + NO** or **2 NC** or **1 NC + 2 NO** or **2 NC + 1NO** or **3NC contact blocks mechanically linked to the solenoid**.
The NC contact(s) are for use in the safety circuit of the machine and the NO contact for signalling the status of the solenoid.

Key operated lock on XCSLF

Safety interlock switches type XCSLF are fitted with a key operated lock allowing the unlocking of the machine guard whilst being held in the lock position by the solenoid (for use by authorised personnel only)



The manual unlocking of the guard using the key operated lock is useful in the following cases:
- whilst the machine is undergoing maintenance (with the key turned to the “UNLOCK” position and then removed, the level of protection is higher in preventing an accidental machine start. The safety for maintenance personnel is thus improved):
- in the event of a power failure
- in the event of an interlocking circuit malfunction (interlocked condition maintained: positive safety).

The electrical supply providing the unlocking via the solenoid always takes priority over manual unlocking using the key operated lock.
The lock fitted to standard safety interlock switches has key withdrawal from the “LOCK” and “UNLOCK” positions.

Safety detection solutions

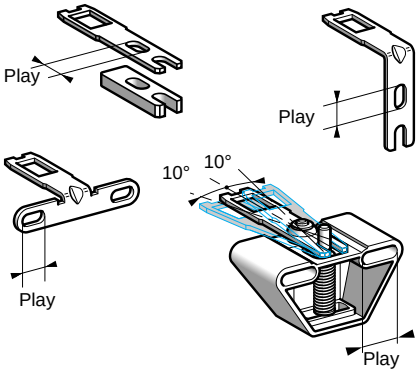
Safety detection solutions
Plastic case key operated switches

Key actuators

The key actuators are common to all plastic case key operated switches (except for XCSLE, see page 15)



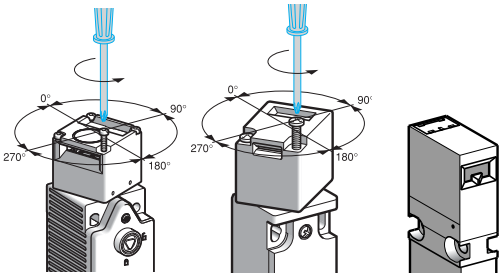
Their oblong fixing holes enable simple adjustment when mounting on moving guards.

A pivoting actuator (both horizontally and vertically) is available when using guard switches in conjunction with hinged guards or guards with imprecise guiding.

Straight actuators are supplied with an adaptor shank for simple replacement of an **XCK P** key operated switch by an **XCSPA** switch, or an **XCK T** key operated switch by an **XCSTA** switch, without the need to drill additional fixing holes for the switch or the actuator.

Turret head

Guard switches XCSPA, XCSTA and XCSLE are fitted with a square turret head which can be rotated through 360° in 90° steps. Guard switches XCSMP have a fixed head



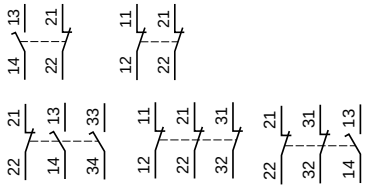
8 directions of actuation are possible for the actuator:
4 in the horizontal plane (1 for **XCSMP**),
4 from above the switch (1 for **XCSMP**),
(4 alternative positions of the actuator slot, depending on the orientation of the head).

When loosening the 2 fixing screws or the 4 fixing screws (**XCSLE**) for re-orientation of the operating head, the head itself remains attached to the body and the contact states remain unchanged (**XCSPA**, **XCSTA**).

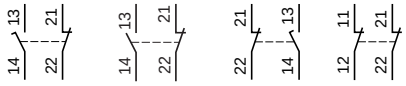
Safety contacts

The key operated switches incorporate either a 2-pole contact block (XCSMP, XCSPA and XCSLE) or a 3-pole contact block (XCSMP, XCSPA and XCSTA and XCSLE), with positive opening operation, which is actuated by insertion or withdrawal of the key actuator attached to the guard

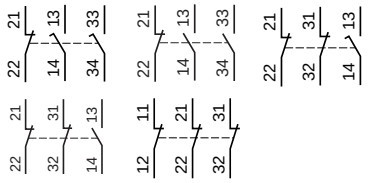
XCSLE



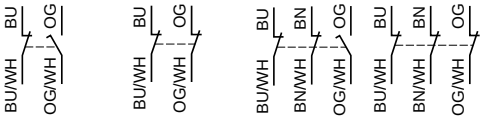
or **XCSPA**



or **XCSPA, XCSTA**



or **XCSMP**

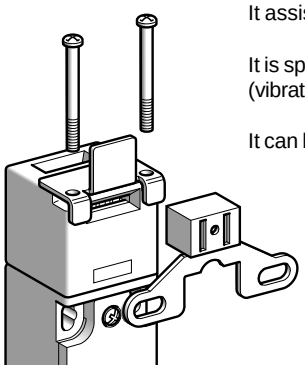


In addition, safety interlock switches type XCSLE incorporate 1 NC or 2 NC contacts (with positive opening operation) actuated by the solenoid.
The NC contact(s) are for use in the safety circuit of the machine. The withdrawal of the key actuator opens the NC safety contact(s), even in the event of the contact sticking or welding.
The two-pole **2 NC** or three-pole **2 NC + 1 NO** or **3 NC** (XCSTA/ XCSMP, XCSPA and XCSLE only) contact block enables up to PL = d, category 3 control circuit to be established conforming to EN/ISO 13849-1, by using both NC safety contacts in redundancy, or up to PL = b, category 1 control circuit by using one NC contact in the safety circuit and the NO other contact for signalling (for example: PLC, illuminated beacon, etc.).

Safety detection solutions
Plastic case key operated switches

Guard retaining device

The guard retaining device XCSZ21 can be used with all plastic key operated switches case type XCSPA and XCSTA that are used in conjunction with either the wide (XCSZ12) or pivoting (XCSZ13) actuator



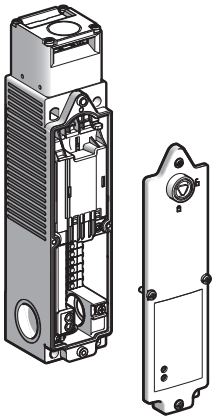
It assists in holding the guard closed by providing an extra retaining force of 5 daN.

It is specially suited for use with light machines operating in arduous conditions (vibration, mechanical shock, guard not vertical, risk of guard rebound on closing, etc.).

It can be used for horizontal actuator actuation directions as well as those from above.

Locking/unlocking by solenoid on XCSLE

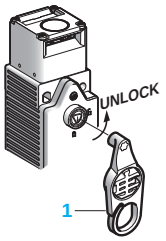
Safety interlock switches type XCSLE incorporate a solenoid for locking/unlocking of the machine guard



With the machine guard closed and locked, the resistance to forcible withdrawal of the actuator fitted to the guard is **Fzh 1100 N** according to the verification principle GS-ET 19 (Fzh =Fmax/1.3) with F max = 1400N. In addition to the 2-pole or 3-pole contact block, positively operated by the actuator fitted to the guard, the switches incorporate **1 or 2 NC contacts mechanically linked to the solenoid**.
The NC contact(s) are for use in the safety circuit of the machine.

Unlocking by special tool for XCSLE

Safety interlock switches type XCSLE are supplied with a special tool 1 that enables unlocking of the machine guard whilst being held in the locked position by the solenoid (for use by authorised personnel only)



The manual unlocking of the guard using the tool 1 is useful in the following cases:
- whilst the machine is undergoing maintenance (with the tool turned to the “UNLOCK” position and then removed, the level of protection is higher in preventing an accidental machine start. The safety for maintenance personnel is thus improved),
- in the event of a power failure,
- in the event of an interlocking circuit malfunction (interlocked condition maintained: positive safety). The electrical supply providing the unlocking via the solenoid always takes priority over manual unlocking using the special tool.

Resilience XCSLE / XCSLF

XCSLE against the partition: max = 1.2 J
XCSLE without partition: max = 4.9 J

XCSLF against the partition: max = 9.6 J
XCSLE without partition: max = 6.4 J

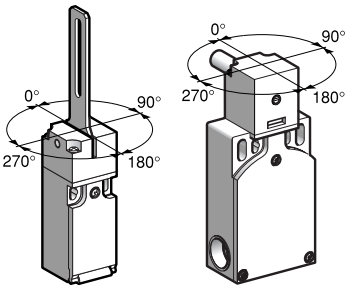
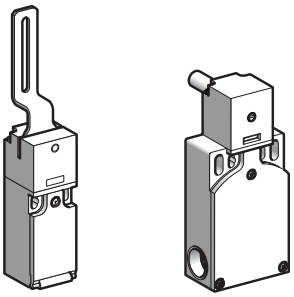
Presentation

Turret head



Safety switches for hinged covers or guards, featuring a hinged lever or spindle operator, incorporate a turret head that can be rotated through 360° in 90° steps.
Two additional self-locking screws are included with each switch for positive fixing of the head.

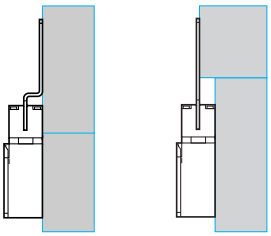
2 types of body



XCSPL *XCSTR*

■ Plastic case, narrow, with 1 cable entry for **XCSPL** and **XCSPR**.
■ Plastic case, wide, with 2 cable entries for **XCSTL** and **XCSTR**.

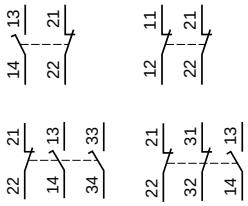
2 types of operating lever, 2 spindle lengths



■ **Levers**
Straight or elbowed (flush with rear of switch), making the lever switches suitable for use with all types of hinged guards, whether:
- flush with the machine framework (use a switch with an elbowed flush lever),
- overhanging in relation to the machine framework (use a switch with a straight lever).

3 alternative operating lever positions allow the switches to be used with guards that open to the left, centre or right.
■ **Spindle operators**
2 spindle lengths: 30 or 80 mm.

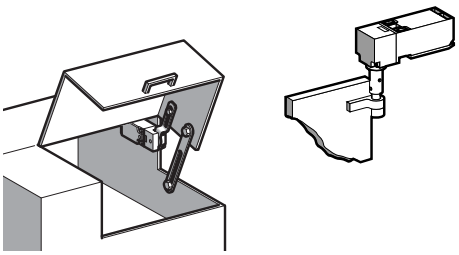
Safety contacts



Safety switches **XCSPL** and **XCSPR** incorporate a 2-pole or 3-pole contact block, with positive opening operation. The contact arrangements can be: NC + NO break before make, 2 NC, 1 NC + 2 NO break before make or 2 NC + 1 NO break before make.
Safety switches **XCSTL** and **XCSTR** incorporate a 3-pole contact block, with positive opening operation. The contact arrangements can be:
1 NC + 2 NO break before make or 2 NC + 1 NO break before make. Opening of the NC safety contact(s) occurs when the operating lever or spindle is displaced by an angle equal to or greater than 5°.

Applications

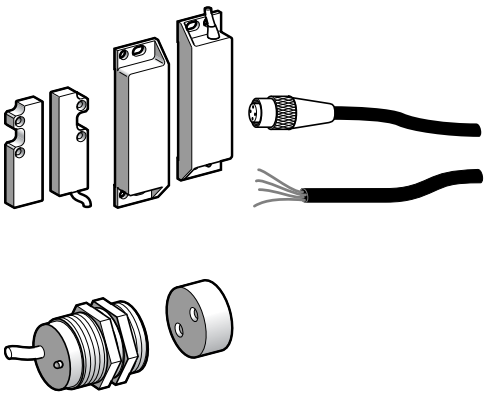
These safety switches provide a solution for monitoring **hinged protective guards** with small opening radius on machines with low inertia (no rundown time).
They are specially suitable for existing machines which need to be brought in-line with the latest standards and directives since they can be used in conjunction with existing covers, including those whose mounting is somewhat imprecise.
Mounting of the safety switch improves the machine operator's level of safety by limiting the opening of the protective guard and reducing the risk of touching any moving parts before they have come to a stop.



Safety detection solutions
Coded magnetic guard switches and systems

Presentation

Coded magnetic switches



3 types of case

- PBT plastic body.
- Compact rectangular, **XCSDMC**
- Standard rectangular, **XCSDMP**
- Cylindrical Ø 30, **XCSDMR**
- Pre-cabled, length 2 m, 5 m or 10 m.
- Connector on flying lead connection:
  - M8: DMC
  - M12: DMP, DMR

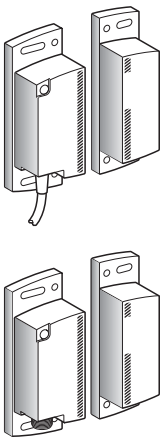
Contacts

Coded magnetic switches are fitted with 2-pole (**XCSDMC/XCSDMR/XCSDMP**) or 3-pole (**XCSDMP**) Reed type contacts and are available with or without a “guard closed” LED indicator.
The NC and NO contacts change state as soon as the magnet is at a distance from the sensor of approximately 8 mm for types **XCSDMP** and **XCSDMR** and approximately 5 mm for type **XCSDMC**

Connection

When used in safety circuits, the Reed technology contacts must always be used in conjunction with a Preventa safety module.

Coded magnetic systems with dedicated transmitter



1 type of case

- PBT plastic body.
- Self-contained range: SIL2/PL =d, category 3 **XCSDM3** and SIL3/PL =e, category 4 **XCSDM4**.
- Pre-cabled, length 2 m, 5 m or 10 m.
- Flying lead with M12 connector.

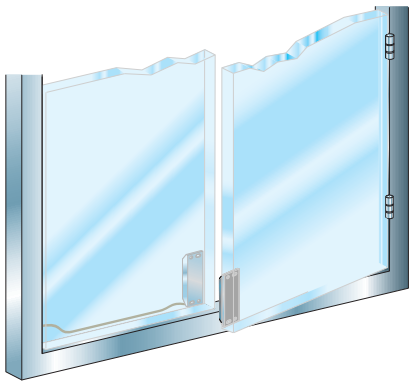
Technology

Coded “Hall effect” detection.
PNP safety outputs
Integrated self-monitoring using micro-processors.
Detection distance from 0 to 10 mm obtained on approach of dedicated transmitter **XCSDMT**.

Functions

- Dynamic EDM (External Device Monitoring) only for **XCSDM4**.
- Fault and short-circuit detection.
- Output diagnostics (non safety related) only for **XCSDM4**.
- LED indicator.
- Possible chaining of up to a maximum of 32 systems for **XCSDM3** only.

Applications

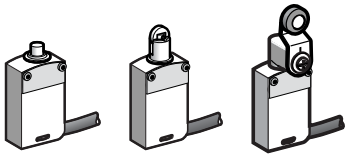


These switches provide a solution for monitoring moveable machine guards fitted to machines with quick rundown times.
They are particularly suitable for guards without accurate guidance and for use in difficult environments (dust, liquids, etc.).
Installing self-contained coded magnetic systems provides an optimum solution (no control system required).
They enable:
- monitoring of one or several guards (opening, closing) on small machines,
- savings in space and the elimination of enclosures and/or control cabinets.

Presentation

Safety limit switches XCSM

With head for linear movement (plunger) or rotary movement (lever)



- Narrow metal case **XCSM**.
- With protective plate, preventing both access to the fixing screws or adjustment of the head by non authorised personnel.
- Torx fixing screws.
- A removable cable entry to facilitate wiring.

Contacts

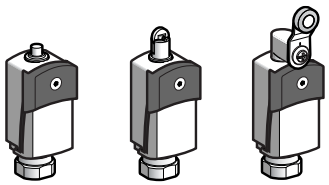
XCSM3 limit switches are fitted with 3-pole contacts and **XCSM4** switches are fitted with 4-pole contacts.
4 versions of complete switches are available incorporating these contacts:
- metal end plunger,
- roller plunger,
- thermoplastic roller lever,
- diameter 19 mm steel roller lever.

Connection

Pre-cabled switches, either 7 x 0.5 mm² or 9 x 0.34 mm².

Safety limit switches XCSD and XCSP

With head for linear movement (plunger) or rotary movement (lever)



- Compact metal case **XCSD** and plastic case **XCSP**.
- With protective plate, preventing both access to the fixing screws or adjustment of the head by non authorised personnel.
- Torx fixing screws.
- A removable cable entry to facilitate wiring.

Contacts

XCSP3●●●● and **XCSD3●●●●** limit switches are fitted with 3-pole contacts.
4 versions of complete switches are available incorporating these contacts:
- metal end plunger,
- roller plunger,
- thermoplastic roller lever,
- diameter 19 mm steel roller lever.

Applications

These switches provide a solution for monitoring covers, guards or grilles on machines with low inertia (quick rundown time), either in conjunction with key operated switches or not.
When used on their own, they are always installed in “positive mode” or combined in pairs, with one switch being in “positive mode” and the other in “negative mode”, and can, when connected to Preventa safety modules, achieve a PL=e, category 4/SIL 3 system.

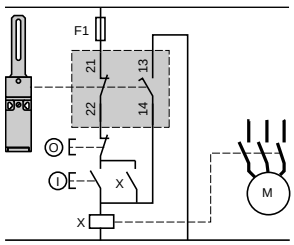
Schemes

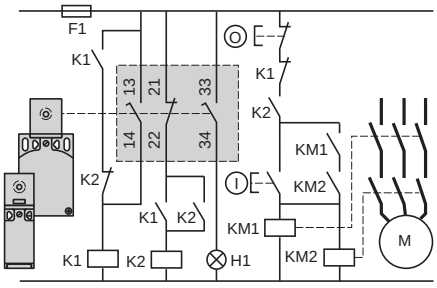
Wiring up to PL=b, category 1 conforming to EN/ISO 13849-1

Example with cable short-circuit protection fuse



Wiring up to PL=d, category 3 conforming to EN/ISO 13849-1

Example with 3-pole 1 NC + 2 NO contact with mixed redundancy of the contacts and the associated control relays



To activate K1, the lever or spindle must be rotated when the supply is switched on.
H1: "lever or spindle displaced from initial position" indicator. When used in conjunction with an XPS module and another safety switch, the rotary lever or spindle operated switch can provide locking protection to PL=d, category 3 or PL=e, category 4 conforming to EN/ISO 13849-1.

Connecting cable		–	Pre-cabled, either 4 x 0.5 mm^2 or 6 x 0.5 mm^2 (**XCSMP**)
Materials		XCSA/B/C Zamak case	XCSMP/PA/TA Polyamide PA66 fibreglass impregnated case
		Actuators (all types): steel XC60, surface treated	

(1) Using an appropriate and correctly connected control system.

(2) Live parts of these switches are protected against the penetration of dust and water. However, when installing take all necessary precautions to prevent the penetration of solid bodies, or liquids with a high dust content, into the actuator aperture. Not recommended for use in saline atmospheres.

Description	**Unit reference**	**Weight kg**
Blanking plugs for operating head slot (Sold in lots of 10)	**XCSZ29**	0.005

(1) Blanking plug for operating head slot included with switch.

(2) Schematic diagrams shown represent the contact states whilst the actuator is inserted in the head of the switch.

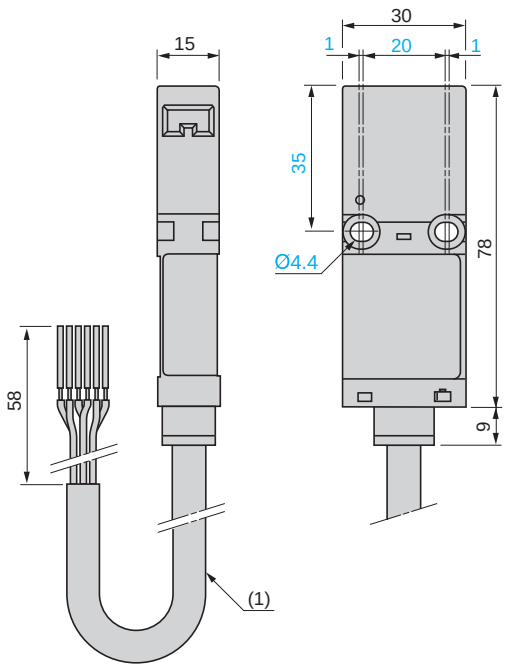
(3) Basic reference, to be completed: replace the dot by 2 for a 2 m long cable, by 5 for a 5 m long cable or by 10 for a 10 m long cable.
*Example: **XCSMP59L●** becomes **XCSMP59L10** for a switch with a 10 m long cable.*

Dimensions: page 41 Setting-up: page 42 Schemes: page 43

Safety detection solutions
Key operated switches
Plastic, fixed head, type XCSMP
Pre-cabled, length 2 m, 5 m or 10 m

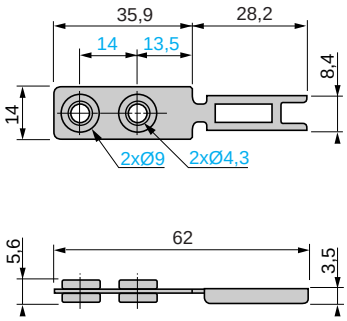
Dimensions

XCSMP

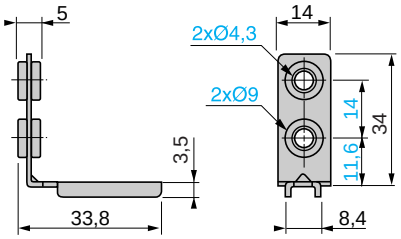


(1) Ø 7.6, length 2, 5 or 10 m.

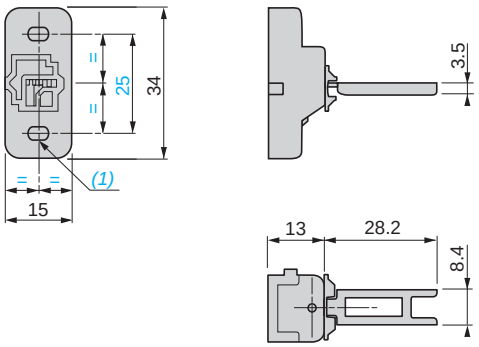
XCSZ81



XCSZ84

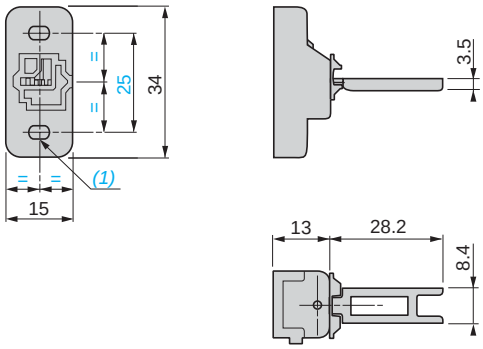


XCSZ83



(1) 2 elongated holes Ø 4.2 x 6.

XCSZ85



(1) 2 elongated holes Ø 4.2 x 6.

Safety detection solutions
Key operated switches
Plastic, fixed head, type XCSMP
Pre-cabled, length 2 m, 5 m or 10 m

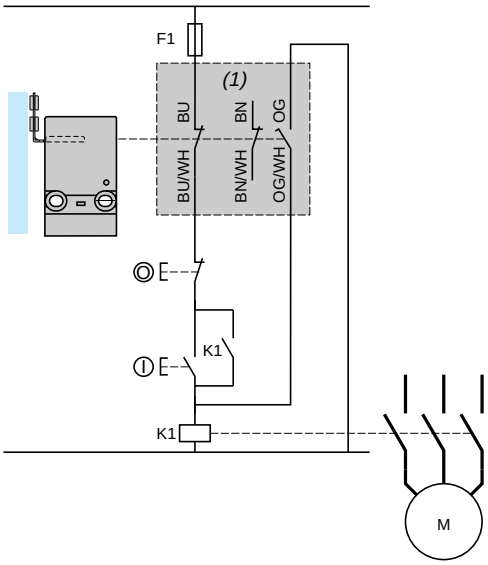
Schemes Note: These schemes are given as examples only, the designer must refer to the relevant safety standards for guidance.

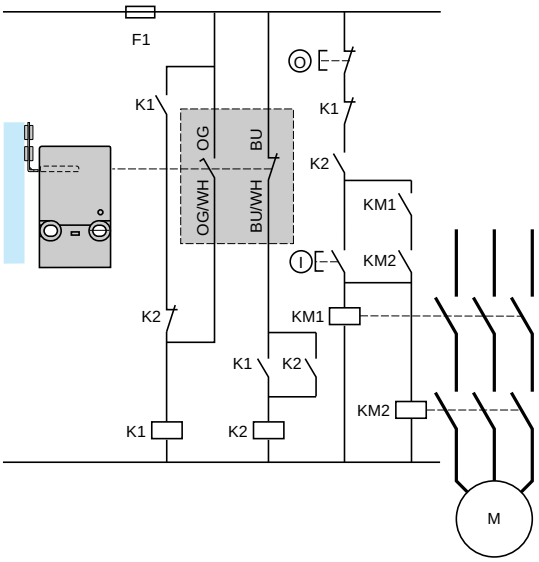
Wiring up to PL=b, category 1 conforming to EN/SO 13849-1

Example with 3-pole 2 NC + 1 NO contact and protection fuse to prevent shunting of the NC contact, either by cable damage or by tampering.



Wiring up to PL=d, category 3 conforming to EN/ISO 13849-1

Example with 2-pole 1 NC + 1 NO contact with mixed redundancy of the contacts and the associated control relays.
To activate K1, it is necessary to remove and re-insert the actuator when the supply is switched on.



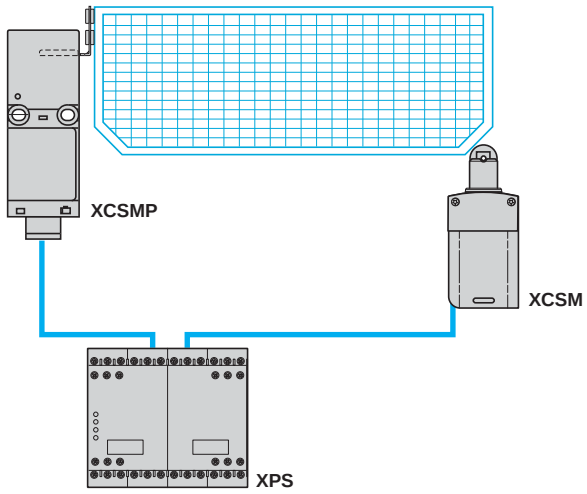
(1) Signalling contact

Wiring to PL=e, category 4 conforming to EN/ISO 13849-1 and SIL CL3 conforming to EN/IEC 62061. Wiring method used in conjunction with Preventa safety module.

(The guard switch should be used in conjunction with a safety limit switch to give electrical/mechanical redundancy).

Method for machines with quick rundown time (low inertia)

Locking or interlocking device based on the principle of redundancy and self-monitoring.
The safety modules ensure these functions.



Locking of actuator and operation in positive mode associated with a safety module.

Safety detection solutions

Key operated switches

Plastic, turret head *(1)*, types XCSPA and XCSTA
1 or 2 cable entries

Type of switch		Without locking of actuator		
				References of switches without actuator (⊖ NC contact with positive opening operation) with 1 or 2 cable entries tapped ISO M16 x 1.5				
2-pole 1 NC + 1 NO *(2)* break before make, slow break		**XCSPA592**	⊖	–
2-pole 1 NC + 1 NO *(2)* snap action		**XCSPA192**	⊖

3-pole 2 NC + 1 NO *(2)* snap action		**XCSPA492**	⊖	–
3-pole 3 NC *(2)* slow break		–		**XCSTA892** ⊖
Weight (kg)		0.110		0.160

References of switches without actuator (⊖ NC contact with positive opening operation) with 1 or 2 cable entries tapped Pg 11 or 1/2" NPT

To order a switch with 1 or 2 cable entries for n° 11 (Pg 11) cable gland (clamping capacity 7 to 10 mm), replace the last number (2) by **1** in the selected reference. Example: XCSPA592 becomes **XCSPA591.**
To order a switch with 1 or 2 cable entries for 1/2" NPT conduit (one n° 11 tapped entry fitted with metal adaptor DE9RA1012), replace the last number (2) by 3 in the selected reference. Example: XCA TA592 becomes **XCSTA593**.

Complementary characteristics not shown under general characteristics (page 38)

Actuation speed	Maximum: 0.5 m/s, minimum: 0.01 m/s
Resistance to forcible withdrawal of actuator	**XCSPA, XCSTA:** 10 N (50 N using actuators **XCSZ12** or **XCSZ13** together with guard retaining device **XCSZ21**)
Mechanical durability	**XCSPA, XCSTA: > 1 million operating cycles**
Maximum operating rate	For maximum durability: 600 operating cycles per hour
Minimum force for positive opening	≥ 15 N
Cable entry	**XCSPA:** 1 entry tapped M16 x 1.5 for ISO cable gland. **XCSTA:** 2 entries tapped M16 x 1.5 for ISO cable gland.
Materials	Body and head: polyamide PA66, fibreglass impregnated

Environment characteristics

Guard switch type		XCSLF (metal)	XCSLE (plastic)
Conformity to standards	Products	EN/IEC 60947-5-1, EN/ISO 13849-1, EN/IEC 62061, UL 508, CSA C22-2 n° 14	
	Machine assemblies	EN/IEC 60204-1, EN/ISO 14119, EN/ISO 12100	
Product certifications		UL *(1)*, CSA, TÜV (pending)	
Maximum safety level *(2)*		PL=e, category 4 conforming to EN/ISO 13849-1 and SIL CL3 conforming to EN/IEC 62061	
Reliability data B_{10d}		5 500 000 (value given for a service life of 20 years, limited by mechanical or contact wear)	
Protective treatment		Standard version: “TC”	
Ambient air temperature	For operation	- 25 ...+ 60 °C	
	For storage	- 40…+ 70 °C	
Vibration resistance		5 gn (10…500 Hz) conforming to EN/IEC 60068-2-6	
Shock resistance		10 gn (duration 11 ms) conforming to EN/IEC 60068-2-27	
Electric shock protection		Class I conforming to EN/IEC 60536	Class II conforming to EN/IEC 60536
Degree of protection		IP 66 and IP 67 (IP 66 for XCSLF●●●●4●● and for XCSLF●●●●6●●) conforming to EN/IEC 60529 and EN/IEC 60947-5-1 *(3)*	
Connection		3 cable entries tapped M20 x 1.5 for ISO cable gland. Clamping capacity 7 to 13 mm or entries tapped for 1/2” NPT (USAS B2-1) conduit or 1 M23 connector output, 15 + 1 PE or 18 +1 PE 24 V ⎓ versions.	
Material		Zamak case	Polyamide case
		Actuators (all types): steel XC60, surface treated	

(1) The safety function on this device has not been tested by the UL.
(2) Using an appropriate and correctly connected control system.
(3) Live parts of these switches are protected against the penetration of dust and water. However, when installing take all necessary precautions to prevent the penetration of solid bodies, or liquids with a high dust content, into the actuator aperture. Not recommended for use in saline atmospheres.

Weight (kg)	1.100	1.100	1.100	1.100	1.100

Solenoid and LED characteristics

Load factor		100 %
Rated operational voltage *(4)*		24 V ⎓ or ∿
Voltage limits	Conforming to EN/IEC 60947-1	- 15 %, + 10 % of the rated operational voltage (including ripple on ⎓)
Consumption		< 5.4 W at 20 °C and max. voltage

References of switches with locking on energization and unlocking on de-energization

To order a guard switch with locking on energization and unlocking on de-energization of the solenoid, replace the 5th number in the selected reference with **5**.
Example: XCSLF272731M2 or XCSLF353531M3 becomes **XCSLF272751M2** or **XCSLF353551M3**.

References of actuators and separate parts

See page 60.

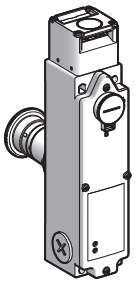
(1) Head adjustable in 90° steps throughout 360°. Blanking plug for operating head slot included with switch.
(2) A key operated lock (two keys included with switch) enables forced opening of the interlocking mechanism, by authorized personnel, allowing withdrawal of the actuator and subsequent opening of the NC safety contacts.
(3) Schematic diagrams shown represent the contact states whilst the actuator is inserted in the head of the switch.
(4) Common power supply for the solenoid and the LEDs.

Note: Due to existing cable connections and to ensure your personal safety, safety screws have been used in front of the product to prevent unauthorized access.

Other versions: consult our Customer Care Centre.

Safety detection solutions

Safety interlock switches
by actuator, with solenoid, turret head *(1)*
With 3 cable entries
Metal, type XCSLF

Type of switch	**Locking on de-energization and unlocking on energization of solenoid** *(2)* **or in emergency by mushroom head pushbutton** *(3)*	
		


LED indication	Orange LED: “guard open” indication Green LED: “guard closed and locked” indication	
Power supply for the solenoid and the LEDs	24 V ⎓ or ∿ (50/60 Hz on ∿)	
Type of contact on solenoid	1 NC + 2 NO break before make 	2 NC + 1 NO break before make 

References of switches without actuator (⊖ NC contact with positive opening operation) with trigger action mushroom head pushbutton, diameter 40 mm, “turn to release” reset, with 3 entries tapped ISO M20 x 1.5

3-pole contact **1 NC + 2 NO** break before make, slow break *(4)*		**XCSLF3535412** ⊖	–
3-pole contact **2 NC + 1 NO** break before make, slow break *(4)*		–	**XCSLF3737412** ⊖
Weight (kg)		1.220	1.220

Solenoid and LED characteristics

Load factor		100 %
Rated operational voltage *(5)*		24 V ⎓ or ∿ or 120 V ∿ or 230 V ∿
Voltage limits	Conforming to EN/IEC 60947-1	- 15 %, + 10 % of the rated operational voltage (including ripple on ⎓)
Consumption		< 5.4 W at 20 °C and max. voltage

References of switches with trigger action mushroom head pushbutton, diameter 40 mm, key no. 455 reset

To order a switch with trigger action mushroom head pushbutton, key no. 455 release, diameter 40 mm at the rear of the product, replace the 5th number in the selected reference with **6**.
Example: XCSLF3535412 becomes **XCSLF3535612.**

References of complete switches with solenoid supply voltage of 120 V or 230 V

To order a switch with a solenoid voltage of 110/120 V ∿, replace the 6th number in the selected reference with **3**.
To order a switch with a solenoid voltage of 220/240 V ∿, replace the 6th number in the selected reference with **4**.

References of complete switches with 3 cable entries tapped for 1/2” NPT conduit

To order a switch with 3 1/2” NPT cable entries, replace the last number in the reference with **3**.
Example: XCSLF3737412 becomes **XCSLF3737413**.

References of actuators and separate parts

See page 60.

(1) Head adjustable in 90° steps throughout 360°. Blanking plug for operating head slot included with switch.

Environment

Conformity to standards		Products		EN/IEC 60947-5-1, UL 508, CSA C22-2 n° 14
		Machine assemblies		EN/IEC 60204-1, EN/ISO 14119
Product certifications				UL, CSA, BG
Maximum safety level *(1)*				PL=e, category 4 conforming to EN/ISO 13849-1 and SIL 3 conforming to EN/IEC 61508
Reliability data B_{10d}				50 000 000 (value given for a service life of 20 years, limited by mechanical or contact wear)
Protective treatment				Standard version: "TH"
Ambient air temperature		For operation	**°C**	- 25…+ 85
		For storage	**°C**	- 40…+ 85
Vibration resistance				10 gn (10…150 Hz) conforming to EN/IEC 60068-2-6
Shock resistance				30 gn (11 ms) conforming to EN/IEC 60068-2-7
Sensitivity to magnetic fields			**mT**	≥ 0.3
Electric shock protection				Class II conforming to EN/IEC 60536
Degree of protection		Conforming to IEC 60529		IP 66 and IP 67 for coded magnetic switches with pre-cabled connection IP 67 for coded magnetic switches with connector on flying lead connection
Materials				Thermoplastic case (PBT) PVC cable (ROHS)

Contact block characteristics

Rated operational characteristics				Ue: 24 V ⎓, Ie: 100 mA max.
Rated insulation voltage (Ui)				Ui: 100 V ⎓
Rated impulse withstand voltage (U imp)			**kV**	2.5 conforming to EN/IEC 60947-5-1
Resistance across terminals		Contact with LED	Ω	57
		Contact without LED	Ω	10
Protection (not using safety module)				External cartridge fuse: 500 mA gG (gl)
Connection	XCSDMC	2 contact model		Pre-cabled, 4 x 0.25 mm², length: 2, 5 or 10 m depending on model or M8 connector on 0.15 m flying lead
	XCSDMP	2 contact model		Pre-cabled, 4 x 0.25 mm², length: 2, 5 or 10 m depending on model or M12 connector on 0.15 m flying lead
		3 contact model		Pre-cabled, 6 x 0.25 mm², length: 2, 5 or 10 m depending on model or M12 connector on 0.15 m flying lead
	XCSDMR	2 contact model		Pre-cabled, 4 x 0.25 mm², length: 2, 5 or 10 m depending on model or M12 connector on 0.15 m flying lead
Contact material				Rhodium
Electrical durability				1.2 million operating cycles
Maximum switching voltage			**V**	100 ⎓
Switching capacity		Contact with LED	**mA**	5…100
		Contact without LED	**mA**	0.1…100
Insulation resistance			**MΩ**	1000
Maximum breaking capacity		Contact with LED	**VA**	3
		Contact without LED	**VA**	10
Maximum switching frequency			**Hz**	150

(1) Using an appropriate and correctly connected control system.

(1) Magnetic switch + coded magnet (XCSZC●●●●).
Switch pre-cabled with 2 m long cable. For other cable lengths, replace the last number of the reference (2) by 5 for a 5 m long cable or by 10 for a 10 m long cable.
*Example: rectangular, compact switch with 1 NC + 1 NO contacts and 10 m cable becomes **XCSDMC59010**.*
(2) Only to be wired in conjunction with an XPSAF module (see page 77).

Safety automation solutions

Preventa safety modules types XPSAC, XPSAXE

For Emergency stop and switch monitoring

Operating principle

Safety modules XPSAC and XPSAXE are used for monitoring Emergency stop circuits conforming to standards EN/ISO 13850 and EN/IEC 60204-1 and also meet the safety requirements for the electrical monitoring of switches in protection devices conforming to standard EN 1088/ISO 14119. They provide protection for both the machine operator and the machine by immediately stopping the dangerous movement on receipt of a stop instruction from the operator, or on detection of a fault in the safety circuit itself.
To aid diagnostics, the modules have LEDs which provide information on the monitoring circuit status.

The XPSAC module has 3 safety outputs and a solid-state output for signalling to the PLC.
The XPSAXE module has 3 safety outputs and a relay output for signalling to the PLC.

Safety automation solutions
Preventa safety modules type XPSAF
For Emergency stop and switch monitoring

Operating principle

Safety modules XPSAF meet the requirements of Performance Level PL e/Category 4 conforming to standard EN/ISO 13849-1.

They are used for:
■ Monitoring Emergency stop circuits conforming to standards EN/ISO 13850 and EN/IEC 60204-1.
■ Electrical monitoring of switches activated by protection devices conforming to standard EN 1088.
Housed in a compact enclosure, the modules have 3 safety outputs.
Preventa safety modules XPSAF●●●●P incorporate removable terminal blocks, thus optimising machine maintenance.
To aid diagnostics, the modules have 3 LEDs on the front face which provide information on the monitoring circuit status.
The Start button monitoring function is configurable depending on the wiring.

Preventa safety modules type XPSAK

For Emergency stop, switch, sensing mat/edges or safety light curtain monitoring

Operating principle

Safety modules XPSAK meet the requirements of Performance Level PL e/Category 4 conforming to standard EN/ISO 13849-1.
They are used for:
■ Monitoring Emergency stop circuits conforming to standards EN/ISO 13850 and EN 60204-1.
■ Electrical monitoring of switches activated by protection devices, with optional selection of synchronisation time between signals.
■ Monitoring 4-wire sensing mats or edges.
■ Monitoring type 4 light curtains conforming to EN/IEC 61496-1 which have solid-state safety outputs with test function (light curtains XUSL).
Housed in a compact enclosure, the modules have 3 safety outputs, a relay signalling output and 4 solid-state signalling outputs for signalling to the process PLC.

Preventa safety modules XPSAK●●●●P incorporate removable terminal blocks, thus optimising machine maintenance.
To aid diagnostics, the modules have 4 LEDs on the front face which provide information on the monitoring circuit status.
The Start button monitoring function is configurable depending on the wiring.

Preventa safety modules type XPSAR

For Emergency stop, switch or safety light curtain monitoring

Operating principle

Safety modules XPSAR meet the requirements of Performance Level PL e/ Category 4 conforming to standard EN/ISO 13849-1 and are designed for the following safety applications:

■ Monitoring Emergency stop circuits conforming to EN/ISO 13850 and EN/IEC 60204-1.

■ Electrical monitoring of switches activated by protection devices conforming to standard EN 1088/ISO 14119.

■ Monitoring type 4 light curtains conforming to EN/IEC 61496-1 that have solid-state safety outputs with test function (light curtains XUSL).

In addition to 7 safety outputs, modules XPSAR incorporate 2 relay signalling outputs and 4 solid-state signalling outputs for signalling to the process PLC.

Safety modules XPSAR●●●●●●P incorporate removable terminal blocks, thus optimising machine maintenance.

To aid diagnostics, the modules have 4 LEDs on the front face which provide information on the monitoring circuit status.

The Start button monitoring function is configurable depending on the wiring.

Safety automation solutions
Preventa safety modules type XPSVNE
For zero speed detection

Operating principle

Preventa safety modules XPSVNE for zero speed detection are used to detect the stop condition of electric motors. Their most common applications include: providing the unlock signal for electrically interlocked sliding or removable machine guards, controlling rotation direction signals for reversing motors and engaging locking brakes after a motor has come to a standstill.

As electric motors run down, a remanent voltage is produced in the windings of the motor due to residual magnetism. This voltage is proportional to the speed of the motor and, therefore, decreases as the motor comes to a standstill.
This remanent voltage is measured in a redundant manner so as to detect the stop condition of the motor. The cabling between the motor windings and the inputs of the XPSVNE module is also monitored to prevent a cabling breakage or fault being seen as a stopped motor.
A transformer should not be used to connect the motor to terminals Z1, Z2 and Z3 since there is no monitoring of the connection with the motor winding via the resistance monitoring.

Modules XPSVNE are suitable for detecting the stop condition of all types of AC or DC motor driven machines which, when the motor runs down, produce a remanent voltage in the windings due to residual magnetism. These machines can be controlled by electronic devices, such as variable speed drives or DC injection brakes.
The input filters for standard XPSVNE modules are designed for a frequency of up to 60 Hz.
For motors operating at a frequency higher than 60 Hz, which therefore produce a high frequency remanent voltage, special modules XPSVNE●●●●HS should be used.

Modules XPSVNE have 2 potentiometers mounted on the front face of the module which allow independent adjustment of the switching threshold for each input circuit. This allows adjustment for different types of motors and application requirements.

To aid diagnostics, modules XPSVNE have 4 LEDs and 2 solid-state outputs to provide information on the status of the zero speed detection circuit.

	Frequency	**Hz**	50/60 (115 V, 230 V)
Consumption		**W**	≤ 3.5 (24 V ⎓)
		VA	≤ 7.5 (115 V ∿), ≤ 7 (230 V ∿)
Frequency of motor power supply		**Hz**	≤ 60 Hz (XPSVN●●42), > 60 Hz (XPSVN●●42HS)
Inputs	Maximum voltage between terminals Z1 - Z2 - Z3	**V**	500 rms
	Detection threshold	**V**	0.01 - 0.1 (adjustable)

Safety automation solutions
Preventa safety modules type XPSVNE
For zero speed detection

Characteristics (continued)

Module type				XPSVNE
Outputs	Voltage reference			Volt-free
	Number and type of safety circuits			1 NO (13-14), 1 NC (21-22)
	Number and type of additional circuits			2 solid-state
	Breaking capacity in AC-15			C300 (inrush: 1800 VA/maintained: 180 VA)
	Breaking capacity in DC-13			24 V/1.5 A - L/R = 50 ms (contact 13-14) 24 V/1.2 A - L/R = 50 ms (contact 21-22)
	Breaking capacity of solid-state outputs			24 V/20 mA, 48 V/10 mA
	Max. thermal current (Ithe)		**A**	2.5
	Output fuse protection		**A**	4 gG, conforming to IEC/EN 60947-5-1, DIN VDE 0660 part 200
	Minimum current (volt-free contact)		**mA**	10 *(1)*
	Minimum voltage (volt-free contact)		**V**	17 *(1)*
Electrical durability				Please refer to our catalogue “Safety functions and solutions using Preventa”.
Rated insulation voltage (Ui)			**V**	300 (degree of pollution 2 conforming to IEC/EN 60947-5-1, DIN VDE 0110 parts 1 & 2)
Rated impulse withstand voltage (Uimp)			**kV**	4 (overvoltage category III, conforming to IEC/EN 60947-5-1, DIN VDE 0110 parts 1 & 2)
LED display				4
Operating temperature			**°C**	- 10…+ 55
Storage temperature			**°C**	- 25…+ 85
Degree of protection Conforming to EN/IEC 60529		Terminals		IP 20
		Enclosure		IP 40
Connection	Type	Terminals		Captive screw clamp
		Terminal block		Removable from module
	1-wire connection	Without cable end		Solid or flexible cable: 0.2…2.5 mm^2
		With cable end		Without bezel, solid or flexible cable: 0.25…2.5 mm^2
				With bezel, solid or flexible cable: 0.25…2.5 mm^2
	2-wire connection	Without cable end		Solid cable: 0.2…1 mm^2, flexible cable: 0.2…1.5 mm^2
		With cable end		Without bezel, flexible cable: 0.25…1 mm^2
				With bezel, flexible cable: 0.5…1.5 mm^2

(1) The module is also capable of switching low power loads (17 V/10 mA) provided that the contact has not been used for switching high power loads (possible contamination or wear of the gold layer on the contact tips).

Safety automation solutions

Preventa safety modules types XPSDMB, XPSDME

For coded magnetic switch monitoring

Operating principle

Safety modules XPSDMB and XPSDME are specifically designed for monitoring coded magnetic safety switches. They incorporate two safety outputs and two solid-state outputs for signalling to the process PLC. Conforming to Performance Level PL e/Category 4 conforming to EN/ISO 13849-1, modules XPSDMB can monitor two independent sensors and modules XPSDME can monitor up to six independent sensors.

To monitor a higher number of magnetic switches using these safety modules, the magnetic switches can be connected in series parallel, while meeting the requirements of Performance Level PL d/Category 3 conforming to standard EN/ISO 13849-1.

Safety modules XPSDM●●●●●P incorporate removable terminal blocks, thus optimising machine maintenance.
To aid diagnostics, the modules have LEDs on the front face which provide information on the monitoring circuit status.

Characteristics

Module type				XPSDMB1132	XPSDMB1132P	XPSDME1132	XPSDME1132P
Maximum achievable safety level				PL e/Category 4 conforming to EN/ISO 13849-1, SILCL 3 conforming to EN/IEC 62061			
Reliability data	Mean Time To dangerous Failure ($MTTF_d$)		**Years**	83.1		82.4	
	Diagnostic Coverage (DC)		**%**	> 99		> 99	
	Probability of dangerous Failure per Hour (PFH_d)		**1/h**	3.92×10^{-9}		3.97×10^{-9}	
Conformity to standards				EN/IEC 60204-1, EN 1088/ISO 14119, EN/IEC 60947-1, EN/IEC 60947-5-1, EN/IEC 60947-5-3			
Product certifications				UL, CSA, TÜV			
Supply (Ue) conforming to IEC 60038	Voltage		**V**	24 ⎓			
	Voltage limits	24 V ⎓		- 20…+ 20 %			
Consumption			**W**	< 2.5		< 3.5	
Module inputs fuse protection				Internal, electronic			
Maximum wiring resistance RL between the module and the coded magnetic switches			Ω	100			
Control unit voltage and current				28 V/8 mA			
Synchronisation time between magnetic switch inputs			**s**	< 0.5			
Safety outputs	Voltage reference			Volt-free			
	Number and type of safety circuits			2 NO			
	Number and type of solid-state outputs			2			
	Breaking capacity in AC-15		**VA**	C300: inrush 1800, maintained: 180			
	Breaking capacity in DC-13			24 V/1.5 A, L/R = 50 ms			
	Max. thermal current (Ithe)		**A**	6			
	Max. total thermal current		**A**	12			
	Output fuse protection		**A**	4 gG or 6 fast acting			
	Minimum current		**mA**	10			
	Minimum voltage		**V**	17			
Electrical durability				Please refer to our catalogue “Safety functions and solutions using Preventa”.			
Response time on input opening			**ms**	< 20			
Rated insulation voltage (Ui)			**V**	300 (degree of pollution 2 conforming to IEC/EN 60947-5-1, DIN VDE 0110 parts 1 & 2)			
Rated impulse withstand voltage (Uimp)			**kV**	4 (overvoltage category III, conforming to IEC/EN 60947-5-1, DIN VDE 0110 parts 1 & 2)			
LED display				3		15	
Ambient air temperature	For operation		**°C**	- 10…+ 55			
	For storage		**°C**	- 25…+ 85			
Degree of protection conforming to EN/IEC 60529				Terminals: IP 20, enclosure: IP 40			
Connection	Type	Terminals		Captive screw clamp terminals			
		Terminal block		Integrated in module	Removable from module	Integrated in module	Removable from module
	1-wire connection	Without cable end		Solid or flexible cable: 0.14…2.5 mm^2	Solid or flexible cable: 0.2…2.5 mm^2	Solid or flexible cable: 0.14…2.5 mm^2	Solid or flexible cable: 0.14…2.5 mm^2
		With cable end		Without bezel, flexible cable: 0.25…2.5 mm^2
