TERMINOLOGY

- **Overload (Lock) Protection**
The Mini-Top Series is equipped with a protection circuit against overload caused by for example the valve catching an alien substance.
When an overload is detected, the Mini-Top stops supplying power to the motor and the status LED blinks in 0.5 sec.

intervals.

The protection is reset automatically with applying opposite-direction input signal or turning the power off and restarting.

• **Restarting Timer**

The Mini-Top Series is equipped with a timer circuit which gives an interval period (0 - 10 seconds) between stop-restart actions to prevent the motor and other internal components from overheating.

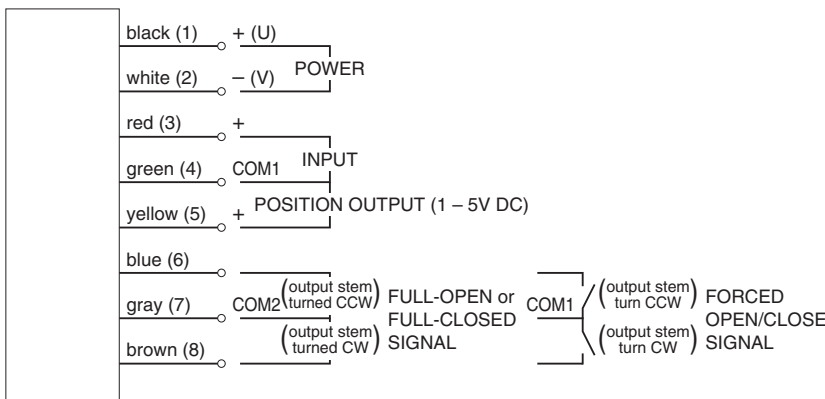

It is recommended to set a long restarting time when the ambient temperature and/or the temperature of flow material is high.

• **Electronic Limiter**

This model is equipped with electronic limiters in order to prevent mechanical locks when the input goes below 0 % or above 100 %.

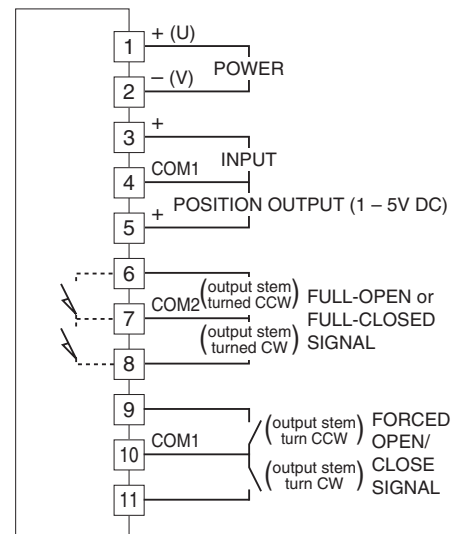

Limiters are set at approx. -0.5 % for the full-closed side, approx. 100.5 % for the full-open side.

TERMINAL CONNECTIONS

(1) to (8): Terminal No. of terminal box.
Full-open/-closed signals and forced open/close signals are optional.
