# **Final Control Elements**

# SERVO-TOP II ELECTRONIC ACTUATOR

(rotary type; max. torque 200 N·m)

### **Functions & Features**

- Control valve actuator
- User-friendly interface
- High resolution stepping motor
- Failsafe (safety operation) function optional
- Actuator mounting: compliant with ISO 5211 (Table 1, 2 F07) (PRP-1x only)
- Lloyd's Resister approved type available (Environmental categories ENV3)

# MODEL: PRP-[1][2]-[3][4]

## **ORDERING INFORMATION**

## • Code number: PRP-[1][2]-[3][4]

Specify a code from below for each of [1] through [4]. (e.g. PRP-01A-L3/E)

Use Ordering Information Sheet (No. ESU-4823).

Factory setting (table below) will be used if not otherwise specified.

PARAMETER	FACTORY SETTING
Action	Reverse
Operation at input failure	Hold position at input failure
Output stem position at full-closed	0°
Output stem position at full-open	90°
Ex-factory stem position	Without failsafe function: 90°
	With failsafe function: 0°
Closed side limiter	0%
Open side limiter	100%
Full-closed signal	3.6%
Full-open signal	96.4%
Split range	Without
Split range type	LO
Split point	50%
Opening/closing speed	01: 100 N·m, 12 sec./90°
	03: 100 N·m, 24 sec./90°
	11: 200 N·m, 16 sec./90°
	13: 200 N·m, 24 sec./90°
Deadband	0.5%
Restart limiting timer	2 sec.
Failsafe opening/closing speed*	01: 100 N·m, 12 sec./90°
	03: 100 N·m, 24 sec./90°
	11: 200 N·m, 16 sec./90°
	13: 200 N·m, 24 sec./90°
Failsafe target position*	0°
Resolution	1/200

\*Option/E

## [1] TORQUE, OPERATION TIME

- **01**: 100 N·m, 12 sec./90°
- **03**: 100 N·m, 24 sec./90°
- **00**: Refer to the torque explanation on the manual. Use specified operation time.
- 11: 200 N·m, 16 sec./90°
- 13: 200 N·m, 24 sec./90°
- **10**: Refer to the torque explanation on the manual. Use specified operation time.

## [2] INPUT

#### Current

A: 4 – 20 mA DC (Input resistance 250 Ω)

Voltage

6: 1 – 5 V DC (Input resistance 1 M $\Omega$  min.)

# [3] POWER INPUT

#### AC Power

K3: 100 - 120 V AC
(Operational voltage range 90 - 132 V, 47 - 66 Hz)
(Not selectable for CE)
L3: 200 - 240 V AC
(Operational voltage range 180 - 264 V, 47 - 66 Hz)

# [4] OPTIONS

Failsafe Function (emergency use) blank: Without /E: With

### **RELATED PRODUCTS (Products sold separately)**

- Programming Unit (model: PU-2x)
- Backup battery (model: PSN-BAT)

## **GENERAL SPECIFICATIONS**

Degree of protection: IP66

**Action**: Reverse or direct (In "reverse" action, the output stem turns counterclockwise (seen from the indicator) with an input signal increase.)

Field selectable with DIP switches

**Operation at input failure**: Stem stop at full-open, full-close or hold position at input failure; field selectable with DIP switches

#### Minimum input signal

Current input:  $\geq$  2.0 mA DC

Voltage input:  $\geq$  0.5 V DC

Wiring conduits: G 1/2 female thread (two)

**Terminal block**: 7.62 mm pitch; M3 screw terminals (torque  $0.8 \text{ N} \cdot \text{m}$ )

Housing material: Diecast aluminum

Coating: Baked acrylic resin

Drive: Stepping motor

Insulation class: E

Power control element: Power MOS-FET

Position detection: Potentiometer

Full-open and full-closed positions: -5 to +95°; minimum

span 45°; field adjustable with control buttons

Full-closed signal adj.: 0 - 25 %

Full-open signal adj.: 75 - 100 %

Close side limiter adjustment: -5 - +25 %

Open side limiter adjustment: 75 – 105 %

Deadband adjustment: 0.1 – 5.0 % (Deadband width affects

the resolution. See Resolution in Performance section.)

Restart limiting timer adjustment: 0 – 30 sec.

## Opening/closing speed adjustment

•PRP-0: 8.5 to 125 sec./90°

•PRP-1: 16 to 125 sec./90°

**Isolation**: Signals to power to sequential signals to battery status (Option /E) to metallic housing

#### Fuse: 3 A (replaceable)

**Protective functions**: Error detection, abnormal temperature increase protection, motor preheat

**Power indicator**: Green LED turns on with power supplied. **Input indicator**: Green LED turns on with normal input **Alarm indicator**: Red LED turns on in error; blinks in 1-sec. intervals when abnormal temperature increase is detected.

Manual operation: Available (10 turns/90°)

#### User-configurable items:

Configurable with Programming unit (model: PU-2x)

- •Output stem position at full-closed/open
- •Opening/closing speed
- •Closed/open side limiter
- •Full-closed/open signal
- •Split range and point
- •Deadband
- •Restart limiting timer
- •Failsafe opening/closing speed (option /E)
- •Failsafe target position (option /E)
- BATTERY (failsafe function option)

### Battery chemistry: Nickel-cadmium

**Battery life**: Rechargeable up to 500 times; or 3 years, whichever is shorter, depending upon conditions of use **Drive capacity**: Once

Charge method: Trickle charge after full rapid charge Charge time: 180 minutes (completely discharged) Power indicator: Red LED turns ON with the power supplied Battery status indicator: Red LED turns ON with full charge; OFF with the power removed.

Charge indicator: Red LED turns ON during rapid charge

## **INPUT SPECIFICATIONS**

DC Current: Resistor (2 W) incorporated

■ Forced Operation: External contact signal input terminals

provided for compulsory opening or closing operation Rating: 5 V DC @ 2.5 mA

■ Split Range: Specify split range type and split point. Split range type: LO or HI

Split point: 30 - 70 %

## **OUTPUT SPECIFICATIONS**

■ Position Signal: 4 – 20 mA DC

Load resistance:  $\leq 300 \Omega$ 

• Sequential Control Signal: "Full-open", "full-closed" and "alarm"

Open collector: 30 V DC @ 100 mA max.

Saturation voltage: 1 V DC

Failsafe Function (optional)

**Battery status output**: Outputs a signal in synchronization with the battery status indicator; ON with full charge and OFF with the power removed.

Open collector: 30 V DC @ 100 mA

Saturation voltage: 1 V DC

Speed & torque

### INSTALLATION

Power consumption: Approx. 180 VA Stand-by consumption: Approx. 18 VA Operating temperature: -20 to +55°C (-4 to +131°F) Charge: 0 to 55°C (32 to 131°F) When the ambient temperature is less than 0°C (32°F), the battery is not charged. However, the ambient temperature reaches within 0 to 55°C (32 to 131°F), the battery is automatically charged. Operating humidity: 30 to 85 %RH (non-condensing) Vibration: Passed test condition below Fixed frequency endurance test Acceleration: 2 G (19.6 m/s<sup>2</sup>) Frequency: at resonant frequency Endurance: 30 min. Direction: X, Y, Z Sweep endurance test Acceleration: 2 G (19.6  $m/s^2$ ) Frequency: 10 to 1000 Hz Cycle: 20 cycles Rate: 1 Oct./min. Endurance: approx. 4 hr. 30 min. Direction: X, Y, Z Mounting position: All directions Do not mount the actuator with its output stem on the upside if the actuator is to be exposed to dripping water and rain.

Weight: Approx. 10.8 kg (23.8 lb) Approx. 12.1 kg (26.7 lb) with Option /E

## PERFORMANCE

**Resolution**: 1/200 with 0.5 % deadband (factory setting); 1/1000 with 0.1 % deadband

**Insulation resistance**:  $\geq$  100 M $\Omega$  with 500 V DC (signal to power to sequential signals to battery status (Option /E) to metallic housing)

**Dielectric strength**: 2000 V AC @ 1 minute (signal or metallic housing to power to battery status

(Option /E) to sequential signals)

500 V AC @ 1 minute (signal to metallic housing)

## **STANDARDS & APPROVALS**

#### EU conformity (CE marking)

•EMC Directive EMI EN 61000-6-4 EMS EN 61000-6-2

- Low Voltage Directive
- · EN 61010-1
- Installation Category II (300V)
- $\cdot$  Reinforced insulation:

Power voltage to signal or seq. signals Power voltage to battery status (with failsafe function only)

Power voltage to metallic housing

- · Pollution Degree 2
- •RoHS Directive EN IEC 63000

### **FUNCTIONS**

#### Error Detection

When the position signal is deviated from the input signal but the output stem is stuck due to overload or certain malfunction, the PRP repeats starting the motor at the maximum torque for several times.

If the stem is still stuck after that, the PRP outputs an alarm signal (LED turned ON) and stops power supply to the motor.

In order to reset the PRP, apply several times 0% and 100% input signals in turn, or turn off and on the power supply.

#### Abnormal Temperature Increase Protection

When the incorporated temperature sensor detects an abnormal temperature increase in the motor, the alarm LED blinks (repeating 0.5-sec. ON – 0.5-sec. OFF) and the power supply to the final control element motor is stopped until the temperature decreases to an acceptable level. The PRP is designed to resume automatically power supply to the motor. It takes longer to resume normal operation when ambient temperature is higher.

#### • Restart Limiting Timer

This unit is equipped with a timer protecting the motor from overheating. The timer prevents the motor from restarting for a certain interval once the motor has been stopped within deadband.

When the high temperature protection is activated in a high temperature ambient, adjust the timer to a longer interval.

#### Motor Preheating Function

When the internal temperature sensor detects a temperature lower than  $0^{\circ}C / 32^{\circ}F$  (approximate) on the surface of the motor, the unit supplies current to the motor to warm up the motor to  $0^{\circ}C / 32^{\circ}F$ .

Maintain the power supply ON when this unit is used in the ambient temperature below  $0^{\circ}$ C or  $32^{\circ}$ F.

#### Resolution

The ratio that the stem of the unit rotates according to input signal.

E.g. Resolution is 1/200 for the specification that input signal is 4 to 20 mA, output stem 90°, direct or reverse action. As the span of input signal is 16 mA (20 - 4 = 16 mA), when input signal is changed by 0.08 mA step (16 mA / 200 = 0.08 mA), the output stem rotates 0.45° (90° / 200 = 0.45°).

(Even for output stem  $45^{\circ}$ setting, resolution is 1/200 =

PRP SPECIFICATIONS

ES-4823 Rev.15 Page 3/8

0.45°step)

It is not true that input signal = output signal. (Not input signal 4.00 mA DC = output signal 4.00 mA DC, there is difference around 0.04 mA DC.)

### **REFERENCE DATA**

Below data is based on the test results and serves as a reference only. Actual values may differ depending on the unit. • Fixed frequency endurance test Acceleration: 5.1 G (50 m/s2) Frequency: at resonant frequency Amplitude (Maximum displacement): 0.35 mm Endurance: 30 min. Direction: X, Y, Z • Sweep endurance test according to IEC 61298-3 Acceleration: 6 G (58.8 m/s2) Frequency: 10 to 1000 Hz Amplitude (Maximum displacement): 0.15 mm Cycle: 20 cycles Rate: 1 Oct./min. Endurance: approx. 4 hr. 30 min. Direction: X, Y, Z
