The SUPERPROX® ultrasonic sensors with on/off latch-control output are now available for a wide variety of dual-level control applications. All AC-powered models operate over a 100 to 240 voltage range and there are DC-powered models available with high and low alarm outputs for critical control requirements. The DC models are also available with a sensing range of 2 m (79”).

Capable of reliable monitoring and controlling most liquid and granular materials within the level sensing range, these self-contained sensors are typically used in such applications as opening and closing a valve or starting and stopping a pump.

This ultrasonic sensor series (Model SM502 through Model SM572) offers easy setup, dependable operation, and compatible integration with most programmable logic controllers. Each sensor is epoxy sealed to withstand harsh, wet, messy, dusty, and dirty environments typically associated with level-control applications. The SUPERPROX® housings meet NEMA 4X (indoor use only) and IP67 industry standards. A Dairy 3A approved housing is available as an option.

**Introduction**

Hyde Park’s self-contained, SUPERPROX®, dual-level sensors are capable of monitoring and controlling most nonhazardous liquid or dry material levels within a sensing range of either 51 mm to 1 m (2 to 39”) or 120 mm to 2 m (4.7 to 79”). An ON/OFF latched output is provided by the sensor relative to two level limit set points. The output is used for controlling material levels in tanks, hoppers, reservoirs, etc. as well as loop levels or tension on web processing lines.

These dual-level sensor models are available in three basic operating functions, each of which offers one or more options. The Model Reference Guide on the next page lists and identifies the three functions and options under “Functionality”.

The specific description of each function can be found under these suffixes on the following pages.
Control Compartment

A unique feature available to the user of these sensors is the facility to quickly set them up for a specific application. These sensors are configured through two to four slide switches and one to two push-buttons located inside the watertight control compartment on the sensor. The control compartment for each of the three operating functions is illustrated on the following pages.

To access the control compartment, remove the small square cover on the back of the sensor. Simply loosen the two flat-head cover screws and insert a small blade screwdriver in either the top or bottom slot to remove the cover. A short plastic tether prevents separation of the cover from the sensor.

Sensor Limits Setup

Push-button

First, during installation, make sure the sensor face is as parallel as possible to the surface of the material being detected.

To set the level limits, simply place an object at the desired distance from the sensor for one limit and press the LIMITS push-button once. This sets the first limit. While the LIMITS push-button is depressed, the multicolored LED, located on top of the sensor, is amber. Upon release of the push-button, the LED flashes amber indicating that the second limit needs to be set. Place an object at the desired position for the second limit and press the LIMITS push-button once. Again, while the push-button is depressed, the LED is amber. Upon release of the push-button, the LED flashes amber momentarily and then turns green to indicate acceptance of both limits. At the same time, the sensor output switches from an inactive to active state, placing the sensor in the operational mode, ready to use. When power is off or interrupted, the limits are retained in a nonvolatile memory.

If in setting either level limit the echo from the object is too weak or distorted, the LED flashes red for 10 seconds (or until the button is pressed again) indicating the limit setting was not accepted by the sensor. Attempt to set both limits again, being careful to keep the object surface parallel to the face of the sensor.

Minimum allowed distance between limits is 13 mm (1/2”). The multicolored LED continues flashing red either until the LIMITS push-button is pressed and released once for the first limit setting or until 10 seconds have elapsed. Pressing and releasing the LIMITS push-button once reinitiates the limit setup sequence. If 10 seconds elapse before the LIMITS push-button is pressed and released for the second limit setup, the limits revert back to the previous settings.

Model Reference Guide - SM502 Series

Use the guide below to ensure the correct model number is specified for the application. Please note that not all sensor model combinations are available.

EXAMPLE MODEL:

SM5 0 2 A - 1 73 - LE N R 4

SUPERPROX® Product Series

Power/Connection Type

0...12 to 24 VDC / cable style
2...100 to 240 VAC / cable style (no alarm)
5...12 to 24 VDC / connector style
7...100 to 240 VAC / connector style (no alarm)

Sensing Function

2...Proximity - dual level

Design Level

A...Applies to all DC-powered models
B...Applies to all AC-powered models

Sensing Range

1...51 to 1 m (2 to 39")
4...120 mm to 2 m (4.7 to 79")

Functionality

00...ON/OFF Latch control
14...ON/OFF Delay latch control
19...ON/OFF Delay latch control / default window: +0/- .25"
20...ON/OFF Latch control / Fast response: 20 ms ON/OFF response
44...ON/OFF Latch control / default window: ±0.100"
72...ON/OFF Latch control with dual alarms** / default window: ±0.25", delay 30 sec or × with switch selectable setup
73...ON/OFF Latch control with dual alarms**
74...ON/OFF Latch control with dual alarms** / default window: ±0.125"
76...ON/OFF Latch control with dual alarms** / inverted NPN output

Special Features

... No letter indicates standard sensor with no special features
LE... No change in output on loss of echo
FS... Fluorosilicone transducer face
AA... Remote limit setup (Available on cable models only.)
AB... RS323, 4-digit/2-decimal place output (Available on cable models only.)
AD... Limits push-button disabled
AE... RS323, 5-digit/3-decimal place output (Available on cable models only.)
AF... No LEDs

Housing Types

...No letter indicates standard ULTEM® plastic housing
N...NORYL® Dairy 3A gray plastic housing

Remote Type

...No letter indicates standard coupler
R...Right-angle sensing head with armor cable
S...Straight sensing head with armor cable

Remote Cable Length

...No number indicates standard coupler

1 ...254 mm (10")
2 ...508 mm (20")
3 ...762 mm (30")
4 ...1016 mm (40")
5P...1270 mm (50")
6P...1524 mm (60")

Available in PVC cable only

13 mm. The multicolored LED continues flashing red either until the LIMITS push-button is pressed and released once for the first limit setting or until 10 seconds have elapsed. Pressing and releasing the LIMITS push-button once reinitiates the limit setup sequence. If 10 seconds elapse before the LIMITS push-button is pressed and released for the second limit setup, the limits revert back to the previous settings.
Loss of Echo
Loss of echo occurs when the sensor does not receive echoes from an object within its sensing range for more than one second. When this occurs, the sensor's output automatically switches OFF. When the sensor again receives echoes from a level, the output will either switch or remain in the same state depending on where the echoes are received relative to the level control limits.

“LE” Option
The LE suffix in the Model Reference Guide indicates an available option for users who do not prefer the standard response to loss of echo. With the LE option, when loss of echo occurs for more than one second, there is no change in the output state of the sensor. When the sensor again receives echoes, the output assumes the state relative to the control limit set points.

Function “00”, “20”, “44” ON/OFF Latch Control
This dual-level sensor function allows two level limits, high and low, within which the level of product is to be controlled. As the product level moves above the high limit or below the low limit, the sensor output switches state and latches either ON or OFF to, for example, close or open a valve and stop or run a pump. The output remains latched in the ON or OFF state until the product level moves back beyond the other limit, at which time the output switches state.

Function “00”, “20”, “44” Sensor Configuration Switches
Switch 1 configures the sensor to operate in either a normal or high sensitivity mode. Place this switch in the NORM position for sensing smooth liquid or solid material levels. Place the switch in the HIGH position for sensing turbulent liquid levels and soft or porous material that will deflect or absorb some of the ultrasonic energy.

Switch 2 configures the sensor output to perform either a pump in or pump out control function. Place this switch in the PMPIN position to control the filling process and prevent an overflow of a vessel. Place the switch in the PMPOUT position to control an emptying process and prevent the complete drawdown of a vessel.

Pump-In Mode When the level moves below the low limit, the sensor output switches state and latches, starting a pumping process. The sensor output does not change state until the level moves back above the high limit to stop the pumping process.

Pump-Out Mode When the level moves below the low limit, the sensor output switches state and latches, stopping a pumping process. The sensor output does not change state until the level moves back above the high limit to restart the pumping process.

Switch 3 selects the operating mode for the sensor output to be either normally open (N.O.) or normally closed (N.C.).

Switch 4 selects the allowable time for setting the high and low limits. If the switch is in the DLY 30 position, the allowed setup time is 30 seconds. If the switch is in the DLY  position, the setup time is infinite.

Function “14”, “19”, On/Off Delay Latch Control
This function operates the same as described for the Function “00”, “20”, and “44” models, with one exception. The Function “14” and “19” models allow programmable on/off delay time adjustments of the sensor output. As the level moves above the high limit or below the low limit, the sensor output switches and latches either on or off, following the programmed delay time, in performing the required control function.

Function “14”, “19” Sensor Configuration Switches
Switch 1 configures the sensor to operate in either a normal or high sensitivity mode. Place this switch in the NORM position for sensing smooth liquid or solid material levels. Place the switch in the HIGH position for sensing turbulent liquid levels and soft or porous material that will deflect or absorb some of the ultrasonic energy.

Switch 2 selects the operating mode for the sensor output to be either normally open (N.C. is pump out) or normally closed (N.O. is pump in).

Switch 3 selects the delay time program mode for setting the desired ON and OFF delay times through the DELAYS push-button. See Delay Time Setup for switch operation.

Switch 4 is not used.
Delay Time Functions
The ON delay time prevents the sensor output state from immediately switching active when the sensor starts sensing the level outside that respective level limit set point. The output switches active only after the sensor has continued sensing the level outside that respective level limit set point for the entire ON delay time period.

The OFF delay time prevents the sensor output state from immediately switching inactive when the sensor starts sensing the level outside that respective level limit set point. The output switches inactive only after the sensor has discontinued sensing the level outside that respective level limit set point for the entire OFF delay time period.

Delay Time Setup
Place Switch 3 in the D-OFF position for setting the desired OFF delay time. Press the DELAYS push-button for the length of the desired delay time. The multicolored LED indicator on the sensor momentarily flashes green after release of the DELAYS push-button to acknowledge the delay time has been set into the nonvolatile memory of the sensor.

Place Switch 3 in the D-ON position for setting the desired ON delay time. Press the DELAYS push-button for the length of the desired delay time. The multicolored LED indicator on the sensor momentarily flashes green after release of the DELAYS push-button to acknowledge the delay time has been set into the nonvolatile memory of the sensor.

Resetting Delay Times
Place Switch 3 in the D-OFF position and press the DELAYS push-button two successive times for resetting the OFF delay time to the minimum response time. Perform the same process with Switch 3 in the D-ON position for resetting the ON delay time to the minimum response time. The multicolored LED indicator on the sensor momentarily flashes green after the second release of the DELAYS push-button to acknowledge the delay time has been reset to the minimum response time.

Function “72”, “73”, “74”, “76” On/Off Latch Control with Dual Alarms
This dual-level, on/off latch-control sensor function is, again, similar in operation to the Function “00”, “20”, and “44” sensors in that it also allows two level limits, a high and low, within which the level of product is to be controlled. An added feature enables the user to set two discrete alarm set points anywhere within the sensing range where alarm outputs are required to protect the equipment from potential damage.

This function is only available in DC-powered models having current sinking, NPN outputs. Current sourcing, PNP outputs are not available.

Sensor Operating Profile
Function “72”, “73”, “74”, “76” Sensor Configuration

Switch 1 configures the sensor output to perform either a pump in or pump out control function. Place the switch in the PMPIN position to control the filling process and prevent an overflow of a vessel. Place the switch in the PMPOUT position to control an emptying process and prevent the complete drawdown of a vessel.

Pump-In Mode When the level moves below the low limit, the sensor output switches state and latches, starting a pumping process. The sensor output does not change state until the level moves back above the high limit to stop the pumping process.

Pump-Out Mode When the level moves below the low limit, the sensor output switches state and latches, stopping a pumping process. The sensor output does not change state until the level moves back above the high limit to restart the pumping process.

Switch 2 selects the operating mode for the sensor output to be either normally open (N.O.) or normally closed (N.C.).

Switch 3 and Switch 4 are not used.

Sensor Operating Profile Function “72”, “73”, “74”, “76” Control Compartment

Dual-Alarm Outputs
The dual-alarm outputs in the Function “72”, “73”, “74”, and “76” sensors operate in a fail-safe manner. The alarms are normally ON, conducting or sinking, with the level inside both alarm limits. For example, the high alarm output switches OFF when the level rises above the high alarm limit. Conversely, the low alarm switches OFF when the level drops below the low alarm limit.

Loss of Echo and the “LE” Option
Like the outputs of the other dual-level sensors, the dual-alarm outputs in the Function “72”, “73”, “74”, and “76” sensors also switch OFF with a loss of echo condition. Upon echo restoration, both alarm outputs switch ON when the level is inside both alarm limits. Should the level be outside one of the alarm limits, that alarm output will remain OFF.

With the “LE” option, when loss of echo occurs for more than one second, there is no change in either the control level or alarm level output states of the sensor. When the sensor again receives echoes from within its sensing range, those outputs assume the state relative to the control and alarm limit set points.

Multicolored LED Indicator During Alarm Setup Mode for Function “72”, “73”, “74”, and “76” Sensors
Press and release the ALARMS push-button with the level at the desired low alarm limit.

- Flashing Amber - Low alarm limit is set.

Press and release the ALARMS push-button with the level at the desired high alarm limit.

- Flashing Red - High alarm limit is set.
IMPORTANT: When either one of the alarm limits is reset for a different level, the other alarm limit must also be reset.

**Multicolored LED Indicator in Operational Mode for Function “72”, “73”, “74”, and “76” Sensors**

There are four possible setup mode combinations for setting where the alarm level outputs are inactive with respect to the control level output. The table below illustrates the LED status colors for all four alarm limit setup combinations.

**Electrical Wiring**

Sensor wires must be run in conduit free of any AC power or control wires.

**Outputs**

- AC Models: Triac, switch selectable N.O./N.C.
- PNP Sourcing: Switch selectable N.O./N.C.
- NPN Sinking: Switch selectable N.O./N.C.

**General Specifications**

- **Sonic Frequency**: 200 kHz
- **Maximum off-state leakage current**: less than 160 mA
- **Maximum applied output voltage**: 260 VAC
- **Maximum continuous load current**: 1 Amp
  - Sinking output voltage:
    - AC: 4-pin “mini” style
  - Sinking load current:
    - AC: 4-pin “mini” style
  - Sinking on-state voltage drop:
    - DC: 4 AWG, PVC jacket, 4- or 5-conductor, 3 meters (10’) long, standard
    - AC: 20 AWG, PVC jacket, 4-conductor, 3 meters (10’) long, standard
- **Connections**
  - Cable Style Models:
    - DC: 4 AWG, PVC jacket, 4- or 5-conductor, 3 meters (10’) long, standard
    - AC: 20 AWG, PVC jacket, 4-conductor, 3 meters (10’) long, standard
- **Protection**
  - Power Supply: current-limited over-voltage, ESD, reverse polarity, fuse on AC Model
  - Outputs: current-limited over-voltage, ESD, over-current, fused TRIAC on AC Model
- **Environmental**
  - Operating Temperature Range: 0°C to 50°C (32°F to 122°F)
  - Storage Temperature Range: -40°C to 100°C (-40°F to 212°F)
  - Operating Humidity: 100%
  - Protection Ratings: NEMA 4X (indoor use only), IP67
  - Chemical Resistance: Resists most acids and bases, including most food products.
    - Fluorosilicone transducer face is available to provide resistance to aromatic and petroleum-based hydrocarbons.
- **Agency Approvals**
  - CE Mark: CE conformity is declared to:
    - EN61010-1: 1990 including amend. No.1.1992
    - EN55011 Group 1 Class A, EN50082-1.
  - Declaration of conformity available upon request
  - AC Models SM522/572 carry the ETL safety label.
- **Construction**
  - Dimensions (overall):
    - AC222: 147 mm (5.78") H, 92 mm (3.63") W x 44 mm (1.75") L
    - AC229: 153 mm (6") H, 95 mm (3.75") W x 44 mm (1.75") L

**Accessories**

- **Model AC105**: Straight, 7/8-16 mini, 4-conductor, mating connector cable, 4 m (12’), for connector style sensors
- **Model AC105-50**: Straight, 7/8-16 mini, 4-conductor, mating connector cable, 15 m (50’), for connector style sensors
- **Model AC115**: Straight, 7/8-16 mini, 5-conductor, mating connector cable, 4 m (12’), for Model SM552A-X7X series dual-level sensors
- **Model AC115-50**: Straight, 7/8-16 mini, 5-conductor, mating connector cable, 15 m (50’), for Model SM552A-X7X series dual-level, connector-style sensors
- **Model AC213**: Stainless and Teflon, remote sensing probe mounting bracket
- **Model AC222**: Standard, stainless mounting bracket assembly, slotted for vertical adjustment
- **Model AC229**: Stainless, plate-style, right-angle, mounting bracket, with base slotted for forward reverse adjustment and side slotted for sensor adjustment
- **Model AC230**: Three-piece, stainless, mounting bracket assembly with O-ring mount for sensor models with remote heads.

See page 7-1 for accessory photos.
