TeSys contactors

TeSys D, TeSys D Green contactors

Environment							
Contactor type LC1			D09...D18 DT20 and DT25	D25...D38 DT32 and DT40	D40A...D80A DT60A and DT80A	D80...D95	D115 and D150
Rated insulation voltage (Ui)	Conforming to IEC 60947-4-1, overvoltage category III, degree of pollution: 3	V	690			1000	
	Conforming to UL, CSA	V	600				
Rated impulse withstand voltage (Uimp)	Conforming to IEC 60947	kV	6			8	
Conforming to standards			IEC/EN 60947-4-1, IEC/EN 60947-5-1, UL 60947-4-1, CSA C22.2 n° 60947-4-1, UL 60947-5-1, CSA C22.2 n° 60947-5-1, GB/T 14048.4				
Product certifications ⁽¹⁾			UL, CSA, CCC, EAC, CB certification, EU-MR-RO by DNV-GL			UL, CSA, CCC, EAC, CB certification, DNV-GL, RINA, BV, LRoS	
Degree of protection ⁽²⁾ (front face)	Conforming to IEC 60529						
	Power circuit connections		Protection against direct finger contact IP20				
	Coil connection		Protection against direct finger contact IP20				
Climatic withstand			According to IACS E10 and IEC 60947-1 Annex Q category D			According to IACS E10	
Ambient air temperature around the device	Storage	°C	-60...+80				
	Operation ⁽³⁾	°C	-40...+60				
	Allowed with derating ^{(3) (4)}	°C	+60...+70 at Uc to 1.●● x Uc				
Maximum operating altitude	Without derating	m	3000				
Operating positions ⁽⁵⁾	Without derating in the following positions		AC and DC coils AC/DC and "BBE" coils		AC coils AC/DC and "BBE" coils		DC coils
							
	Positions that are not allowed		For --- contactors LC1 D09 to LC1 D150.				
							
Flame resistance	Conforming to IEC 60695-2-11	°C	850				
Shock resistance ⁽⁶⁾ 1/2 sine wave = 11 ms	Contactor open		10 gn	8 gn	10 gn	8 gn	6 gn
	Contactor closed		15 gn	15 gn	15 gn	10 gn	15 gn
Vibration resistance ⁽⁶⁾ 5...300 Hz	Contactor open		2 gn				
	Contactor closed		4 gn	4 gn	4 gn	3 gn	4 gn

⁽¹⁾ Contactor **LC1 D95** with d.c. coil is not UL/CSA certified.

⁽²⁾ Protection provided for the cabling c.s.a.'s indicated on the next page and for connection by cable. For lug type: add a protective cover.

⁽³⁾ As per IEC60947-4-1, operating time and drop out voltage given and tested for -5...+40 °C.

⁽⁴⁾ Refer to operational current in AC1 (page A6/30).

⁽⁵⁾ When mounting on a vertical rail, use a stop.

⁽⁶⁾ Without modifying the power contact states, in the most unfavourable direction (coil energised at Ue).

In case of vibration, it is recommended to mount the devices separately by screws on metal plate.

TeSys contactors

TeSys D, TeSys D Green contactors

Pole characteristics TeSys D, TeSys D Green

Contactor type		LC1	D09 (3P)	DT20 D098	D12 (3P)	DT25 D128	D18 (3P)	DT32 D188	D25 (3P)	DT40 D258

Maximum operating rate at ambient temperature ≤ 60 °C	In operating cycles per hour			3600	–		

(1) The operating times depend on the type of contactor electromagnet and its control mode.

The closing time "C" is measured from the moment the coil supply is switched on to initial contact of the main poles.

The opening time "O" is measured from the moment the coil supply is switched off to the moment the main poles separate.

Characteristics

⁽¹⁾ BTR screws: hexagon socket head. In accordance with local electrical wiring regulations, a size 4 insulated Allen key must be used (reference **LAD ALLEN4**, see page B8/29).

⁽²⁾ If cable ends are used, choose the next size down (example: for 2.5 mm², use 1.5 mm²) and square crimp the cable ends using a special tool.

TeSys contactors

TeSys D, TeSys D Green contactors

Characteristics of auxiliary contacts incorporated in the contactor			
Mechanically linked contacts	Conforming to IEC 60947-5-1		Each contactor has 2 N/O and N/C contacts mechanically linked on the same movable contact holder
Mirror contact	Conforming to IEC 60947-4-1		The N/C contact on each contactor represents the state of the power contacts and can be connected to a PREVENTA safety module
Rated operational voltage (Ue)	Up to	V	690
Rated insulation voltage (Ui)	Conforming to IEC 60947-1	V	690
	Conforming to UL, CSA	V	600
Conventional thermal current (Ith)	For ambient temperature $\leq 60^\circ\text{C}$	A	10
Frequency of the operational current		Hz	25...400
Minimum switching capacity $\lambda = 10^{-8}$	U min	V	17
	I min	mA	5
Short-circuit protection	Conforming to IEC 60947-5-1		gG fuse: 10 A
Rated making capacity	Conforming to IEC 60947-5-1, I rms	A	~: 140, ---: 250
Short-time rating	Permissible for	1 s	A 100
		500 ms	A 120
		100 ms	A 140
Insulation resistance		MΩ	> 10
Non-overlap time	Guaranteed between N/C and N/O contacts	ms	1.5 (on energisation and on de-energisation)
Tightening torque	Phillips head n° 2 and Ø6	N.m	1.7

AC-15

DC-13

Operational power of contacts conforming to IEC 60947-5-1

a.c. supply, categories AC-14 and AC-15

Electrical durability (valid for up to 3600 operating cycles/hour) on an inductive load such as the coil of an electromagnet: making current ($\cos \phi 0.7$) = 10 times the power broken ($\cos \phi 0.4$).

Operating cycles	V	24	48	115	230	400	440	600
1 million	VA	60	120	280	560	960	1050	1440
3 million	VA	16	32	80	160	280	300	420
10 million	VA	4	8	20	40	70	80	100

d.c. supply, category DC-13

Electrical durability (valid for up to 1200 operating cycles/hour) on an inductive load such as the coil of an electromagnet, without economy resistor, the time constant increasing with the load.

Operating cycles	V	24	48	125	250	440
1 million	W	96	76	76	76	44
3 million	W	48	38	38	32	—
10 million	W	14	12	12	—	—

TeSys contactors

Auxiliary contact blocks without dust and damp protected contacts for TeSys D, TeSys D Green contactors

Environment						
Contact block type			LAD N or LAD C	LAD T and LAD S	LAD R	LAD 8
Conforming to standards			IEC/EN 60947-5-1, UL 60947-5-1, CSA C22.2 n° 60947-5-1, GB/T 14048.5			
Product certifications			UL, CSA, CCC, EAC, CB certification			
Degree of protection	Conforming to IEC 60529		Protection against direct finger contact IP 2X			
Ambient air temperature around the device	Storage	°C	-60...+80			
	Operation	°C	-5...+60			
Maximum operating altitude	Without derating		m	3000		
Connection by cable	Phillips n° 2 and Ø6 mm Flexible or solid cable with or without cable end		mm²	Min: 1 x 1; max: 2 x 2.5		
Tightening torque			N.m	1.7		
Spring terminal connections	Flexible or solid cable without cable end		mm²	Max: 2 x 2.5		
Instantaneous and time delay contact characteristics						
Number of contacts			1, 2 or 4	2	2	2
Rated operational voltage (Ue)	Up to		V	690		
Rated insulation voltage (Ui)	Conforming to IEC 60947-5-1		V	690		
	Conforming to UL, CSA		V	600		
Conventional thermal current (Ith)	For ambient temperature ≤ 60 °C		A	10		
Frequency of the operational current			Hz	25...400		
Minimum switching capacity	U min	V	17			
	I min	mA	5			
Short-circuit protection	Conforming to IEC 60947-5-1 gG fuse		A	10		
Rated making capacity	Conforming to IEC 60947-5-1	I rms	A	~: 140; ---: 250		
Short-time rating	Permissible for	1 s	A	100		
		500 ms	A	120		
		100 ms	A	140		
Insulation resistance			MΩ	> 10		
Non-overlap time	Guaranteed between N/C and N/O contacts		ms	1.5 (on energisation and on de-energisation)		
Overlap time	Guaranteed between N/C and N/O contacts on LAD C22		ms	1.5	–	–
Time delay (LADT, R and S contact blocks) Accuracy only valid for setting range indicated on the front face	Ambient air temperature for operation		°C	–	-40...+70	-40...+70

TeSys contactors

Control modules, coil suppressor modules and mechanical latch blocks for TeSys D, TeSys D Green contactors

Environment			
Conforming to standards			IEC/EN 60947-5-1, UL 60947-5-1, CSA C22.2 n° 60947-5-1, GB/T 14048.5
Product certifications			UL, CSA
Degree of protection	Conforming to IEC 60529		Protection against direct finger contact IP 2X
Ambient air temperature around the device	Storage	°C	-40...+80
	Operation	°C	-25...+55
	Permissible for operation at Uc	°C	-25...+70

Suppressor modules TeSys D						
Module type			LA4 DA, LAD 4RC, LAD 4RC3	LA4 DB, LAD 4T, LAD 4T3	LA4 DC, LAD 4D3	LA4 DE, LAD 4V, LAD 4V3
Type of protection			RC circuit	Bidirectional peak limiting diode	Diode	Varistor
Rated control circuit voltage (Uc)		V	~ 24...415	~ or --- 24...440	--- 12...250	~ or --- 24...250
Maximum peak voltage			3 Uc	2 Uc	Uc	2 Uc
Natural RC frequency	24/48 V	Hz	400	—	—	—
	50/127 V	Hz	200	—	—	—
	110/240 V	Hz	100	—	—	—
	380/415 V	Hz	150	—	—	—

Mechanical latch blocks ⁽¹⁾ TeSys D, TeSys D Green					
Mechanical latch block type			LAD 6K10	LA6 DK20	
For use on contactor			LC1 D09...D80A DT20...DT80A	LC1 D80...D150 LP1 D80 and LC1 D115	
Product certifications			UL, CSA	UL, CSA	
Rated insulation voltage	Conforming to IEC 60947-5-1	V	690	690	
Rated control circuit voltage	~ 50/60 Hz and ---	V	24...415	24...415	
Power required	For unlatching	~	VA	25	
		---	W	30	
Maximum operating rate	In operating cycles/hour		1200	1200	
On-load factor			10 %	10 %	
Mechanical durability at Uc	In millions of operating cycles		0.5	0.5	

⁽¹⁾ Unlatching can be manually operated or electrically controlled (pulsed).
The LA6 DK or LAD 6K latch coil and the LC1 D operating coil must not be energised simultaneously.
The duration of the LA6 DK or LAD 6K and LC1 D control signals must be ≥ 100 ms.

TeSys contactors

Electronic serial timer module for TeSys D, TeSys D Green contactors

Environment TeSys D, TeSys D Green			
Module type		LA4 DT (On-delay)	
Conforming to standards			IEC 60255-5
Product certifications			UL, CSA
Degree of protection	Conforming to IEC 60529		Protection against direct finger contact IP 2X
Ambient air temperature around the device	Storage	°C	-40...+80
	Operation	°C	-25...+55
	For operation at Uc	°C	-25...+70
Rated insulation voltage (Ui)	Conforming to IEC 60947-1	V	250
Cabling	Phillips n° 2 and Ø6 mm Flexible or solid conductor with or without cable end	mm²	Min: 1 x 1; max: 2 x 2.5
Tightening torque		N.m	1.7
Control circuit characteristics			
Built-in protection	Of the input		By varistor
	Contact coil suppression		By varistor
Rated control circuit voltage (Uc)		V	~ or ≡: 24...250
Permissible variation			0.8...1.1 Uc
Type of control			By mechanical contact only
Timing characteristics			
Timing ranges		s	0.1...2; 1.5...30; 25...500
Repeat accuracy	0...40 °C		±3 % (10 ms minimum)
Reset time	During time delay period	ms	150
	After time delay period	ms	50
Immunity to microbreaks	During time delay period	ms	10
	After time delay period	ms	2
Minimum control pulse duration		ms	–
Time delay signalling	By LED		Illuminates during time delay period
Switching characteristics (solid state type)			
Maximum power dissipated		W	2
Leakage current		mA	< 5
Residual voltage		V	3.3
Overvoltage protection			3 kV; 0.5 joule
Electrical durability	In millions of operating cycles		30
Function diagram			
Electronic on-delay timer LA4 DT			

TeSys contactors

Interface modules for TeSys D, TeSys D Green contactors

Environment TeSys D, TeSys D Green							
Conforming to standards			IEC 60255-5				
Product certifications			UL, CSA				
Degree of protection	Conforming to IEC 60529			Protection against direct finger contact IP 2X			
Ambient air temperature around the device	Storage	°C	-40...+80				
	Operation	°C	-25...+55				
	Permissible for operation at Uc	°C	-25...+70				
Other characteristics							
Module type			LA4 DFB for TeSys D With relay	LA4 DWB for TeSys D, TeSys D Green Solid state			
Conventional thermal current (Ith)	For ambient temperature ≤ 50 °C	A	8				
Rated insulation voltage	Conforming to IEC 60947-5-1	V	250				
Rated operational voltage	Conforming to IEC 60947-5-1	V	250				
Indication of input state			By integral LED which illuminates when the contactor coil is energised				
Input signals	Control voltage (E1-E2)	V	--- 24	--- 24			
	Permissible variation	V	17...30	5...30			
	Current consumption at 20 °C	mA	25	8.5 for 5 V 15 for 24 V			
	State "0" guaranteed for U	V	< 2.4	< 2.4			
	I	mA	< 2	< 2			
	State "1" guaranteed for U	V	17	5			
Built-in protection	Against reversed polarity		By diode	By diode			
	Of the input		By diode	By diode			
Electrical durability at 220 A/240 V	In millions of operating cycles		10	20			
Maximum immunity to microbreaks		ms	4	1			
Power dissipated	At 20 °C	W	0.6	0.4			
Direct mounting on contactor	With coil	~ 24...250 V	LC1 D80...D150	—			
		~ 100...250 V	—	LC1 D80...D115			
		~ 380...415 V	—	—			
Mounting with cabling adapter LAD 4BB	With coil	~ 24...250 V	LC1 D09...D38, LC1 DT20...DT40	LC1 D09...D38, LC1 DT20...DT40			
		~ 380...415 V	—	—			
Mounting with cabling adapter LAD 4BB3	With coil	~ 24...250 V	LC1 D40A...D80A	LC1 D40A...D80A			
		~ 380...415 V	LC1 D40A...D80A	LC1 D40A...D80A			
Total operating time at Uc (of the contactor)		The operating times depend on the type of contactor electromagnet and its control mode. The closing time "C" is measured from the moment the coil supply is switched on to initial contact of the main poles. The opening time "O" is measured from the moment the coil supply is switched off to the moment the main poles separate.					
			LC1 D09...D38, LC1 DT20...DT40	LC1 D40A...D80A	LC1 D80 and D95		
		With LA4 DFB	"C"	ms	20...30	28...34	28...43
			"O"	ms	16...24	20...24	18...32
Cabling	Phillips n° 2 and Ø6 mm Flexible or solid cable with or without cable end		mm²	Min: 1 x 1; max: 2 x 2.5			
Tightening torque			N.m	1.7

	~ coil		–	10

TeSys contactors

Mini-contactors TeSys LC1 SK and LP1 SK

Use in category AC-3 ($U_e \leq 440$ V)

Control of 3-phase asynchronous squirrel cage motors with breaking whilst running.

The current broken (I_c) in category AC-3 is equal to the rated operational current (I_e) of the motor.

Use in category AC-1 ($U_e \leq 440$ V)

Control of resistive circuits ($\cos \varphi \geq 0.95$).

The current broken (I_c) in category AC-1 is equal to the current (I_e) normally drawn by the load.

TeSys contactors

Mini-contactors TeSys LC1SKGC, for use in modular panels

Use in category AC-3 ($U_e \leq 440 \text{ V}$)

Control of 3-phase asynchronous squirrel cage motors with breaking whilst running.
The current broken (I_c) in category AC-3 is equal to the rated operational current of the motor.

1. LC1 SKGC2
 2. LC1 SKGC3 and SKGC4
- only up to 415 V

Use in category AC-1 ($U_e \leq 440 \text{ V}$)

Control of resistive circuits ($\cos \varphi \geq 0.95$).

The current broken (I_c) in category AC-1 is equal to the current (I_e) normally drawn by the load.

GC 25

Presentation

TeSys GC contactors are designed for use in modular panels and enclosures. These contactors feature:

■ Easy installation:

- ☐ quick clip-on fixing and locking onto 35 mm omega rail
- ☐ easy connection by means of ready-to-tighten, captive, pozidrive screw terminals.

■ Compact size:

All units have a common depth of 60 mm and width in modules of 17.5 mm (width of one module: 17.5 mm).

■ User safety:

- ☐ use of materials conforming to strictest fire safety standards
- ☐ live parts protected against direct finger contact
- ☐ completely safe operation
- ☐ state indication on front panel.

Standards

This range of modular contactors has been designed taking into account the requirements of international standard IEC 61095.

This standard is specific to "Electromagnetic contactors for domestic and similar use".

It has very strict requirements, meeting the expectations of users, with regard to the safety of equipment and persons in "premises and areas accessible to the public". Conformity with this standard makes it possible to obtain the following quality labels without the need for additional tests: NF-USE, VDE, CEBEC, etc.

Applications

TeSys GC modular contactors are designed for switching all single-phase, 3-phase or 4-phase loads up to 100 A.

Power switching

These contactors have multiple applications in industrial, agricultural and commercial premises, hospitals and the home, i.e. wherever switching of a specific supply is required:

- lighting
- heating
- ventilation
- motorised shutters or gates.

Setting-up precautions

The contactor controls must be bounce free. If not, connect a coil suppression block **1** (GAP 21 or 23) across the coil terminals y 250 V.

When several contactors which operate at the same time are mounted side by side, a GAC 5 ventilation 1/2 module **2** must be fitted every 2 contactors.

It is advisable to mount electronic units at the bottom of the modular panel and to separate them from electromechanical units by a space **3** equal to one module, or by 2 ventilation 1/2 modules (GAC 5).

Derating of contactors mounted in a modular enclosure if the temperature within the enclosure is $> 40^{\circ}\text{C}$.

Contactor rating	40 °C	50 °C	60 °C ⁽¹⁾
16 A	16 A	14 A	13 A
25 A	25 A	22 A	20 A
40 A	40 A	36 A	32 A
63 A	63 A	57 A	50 A
100 A	100 A	87 A	80 A

⁽¹⁾ Ventilation 1/2 module must be fitted.

Lighting (Maximum number of lamps depending on the power of each unit) Presentation of installations according to type of supply

■ Single-phase circuit, 230 V

■ 3-phase circuit, 230 V

The maximum number of lamps which can be operated per phase is equal to the number of lamps in the "single phase 230 V" table divided by $\sqrt{3}$.

■ 3-phase circuit, 400 V (with neutral)

The maximum number of lamps which can be operated per phase is equal to the total number of lamps in the "single-phase 230 V" table.

Contactor rating for a single-phase 230 V circuit (single-pole)

I_B value of current drawn by each lamp at its rated voltage.

C: unit capacitance for each lamp.

I_B and C correspond to values normally quoted by lamp manufacturers

Heating (AC-7a)

Single-phase, 2-pole switching

3-phase switching

Heating by resistive elements or by infra-red radiators, convectors or radiators, heating ducts, industrial furnaces. The current peak between the hot and cold states must not exceed 2 to 3 In at the moment of switch-on.

Contactor selection according to power and required electrical life

Electrical durability (in operating cycles)	Maximum power (kW)					Contactor rating
	100 x 10 ³	150 x 10 ³	200 x 10 ³	500 x 10 ³	10 ⁶	
Single-phase switching 230 V (2-pole)	3.5	3	2.2	1	0.8	16 A

TeSys GY "dual tariff" contactors

GY 25

Presentation

TeSys GY "dual tariff" contactors are designed for use in modular panels and enclosures.

These contactors feature:

■ Easy installation:

- ☐ quick clip-on fixing and locking onto 35 mm omega rail
- ☐ easy connection by means of ready-to-tighten captive, pozidrive screw terminals.

■ Compact size

All units have a common depth of 60 mm and width in modules of 17.5 mm (width of one module: 17.5 mm).

■ User safety:

- ☐ use of materials conforming to strictest fire safety standards
- ☐ live parts protected against direct finger contact
- ☐ completely safe operation
- ☐ state indication on front panel.

"Dual tariff" contactors are designed for use with Electricity Supply Authority dual tariffs.

They have a 4-position selector switch on the front panel:

"Stop" (O)	For switching off the load, e.g. for prolonged periods of absence.
"Off peak" Automatic start (A)	The contactor switches automatically during "off peak" hours as set by the Supply Authority remote control and thus supplies the load, (washing machine, dishwasher, convector heater, water heater) during this period, at an economy rate to the user.
"Peak time" Manual start (I)	In this position, the contactor supplies the load to cater for additional requirements for hot water, heating, etc., but at the standard rate. The contactor returns automatically to the "off-peak" position at the start of the "off-peak" period.
"Peak time" Manual override with lock	Facility for setting the contactor to continuous manual operation, ignoring the automation system and the Supply Authority control; setting and locking is achieved by means of a tool, with manual return to the "AUTO" position.

Standards

This range of modular contactors has been designed taking into account the requirements of international standard IEC 61095.

This standard is specific to "Electromagnetic contactors for domestic and similar use".

It has very strict requirements, meeting the expectations of users, with regard to the safety of equipment and persons in "premises and areas accessible to the public". Conformity with this standard makes it possible to obtain the following quality labels without the need for additional tests: NF-USE, VDE, CEBEC, etc.

"Dual tariff" modular contactors are designed for switching all single-phase, 3-phase or 4-phase loads up to 63 A.

TeSys GY contactors have multiple applications in industrial, agricultural and commercial premises, hospitals and the home, i.e. wherever switching of a specific supply is required:

- lighting,
- heating, ventilation,
- motorised shutters or gates.

Setting-up precautions

The contactor controls must be bounce free. If not, connect a coil suppression block **1** (GAP 21 or 23) across the coil terminals ≤ 250 V.

When several contactors which operate at the same time are mounted side by side, a GAC 5 ventilation 1/2 module **2** must be fitted every 2 contactors.

It is advisable to mount electronic units at the bottom of the modular panel and to separate them from electromechanical units by a space equal to one module **3** or by 2 ventilation 1/2 modules GAC 5.

Derating of contactors mounted in a modular enclosure if the temperature within the enclosure is > 40 °C.

Contactor rating	40 °C	50 °C	60 °C ⁽¹⁾
16 A	16 A	14 A	13 A
25 A	25 A	22 A	20 A
40 A	40 A	36 A	32 A
63 A	63 A	57 A	50 A

Presentation

TeSys GF impulse relays are designed for use in modular enclosures.

They feature:

■ Easy installation:

- ☐ quick clip-on fixing and locking onto 35 mm omega rail
- ☐ easy connection by means of ready-to-tighten captive, pozidrive screw terminals.

■ Compact size

Units have a common depth of 60 mm and width of 18 mm.

■ User safety:

- ☐ live parts protected against direct finger contact
- ☐ completely safe operation
- ☐ state indication on front panel.

Standards

This range of modular impulse relays has been designed taking into account the requirements of international standard IEC 60669-2.

This standard is specific to "Impulse relays".

Conformity with this standard makes it possible to obtain the following quality labels without the need for additional tests: NF-USE, VDE, CEBEC, etc.

Functions

Modular impulse relays are designed for opening and closing of circuits which are remotely controlled by impulses. The position is mechanically maintained.

These impulse relays are used in lighting circuits when there are more than two switching points.

Power switching

TeSys GF impulse relays have multiple applications in industrial, agricultural and commercial premises, hospitals and the home, i.e. wherever switching of a specific lighting supply is required.

⁽¹⁾ I_e ≤ 17 A for electrical durability, I_e ≤ 100 A for occasional duty.

⁽²⁾ I_e > 17 A for electrical durability, I_e > 100 A for occasional duty.

⁽³⁾ The value 6 P (in watts) is based on practical observations and is considered to represent the majority of d.c. magnetic loads up to the maximum limit of P = 50 W i.e. 6 P = 300 ms = L/R.

Above this, the loads are made up of smaller loads in parallel. The value 300 ms is therefore a maximum limit whatever the value of current drawn.

- 1 Motor Disconnect (Disconnect switch)
- 2 Motor Branch Circuit Protection (Short-circuit protection)
- 3 Motor Controller (Contactor)
- 4 Motor Overload Protection (Thermal overload relay)

Starters for the North American market

In recent years, the North American market has started to harmonise UL, CSA and ANCE standards, as well as the industrial installation codes provided by national regulations (NEC for the United States, CEC for Canada and MEC for Mexico). ⁽¹⁾ Major improvements, carried out by the Canena ⁽²⁾ are aimed at harmonising product requirements based on IEC ⁽³⁾ standards.

However, the North American codes use specific terminology for defining the functions of a starter.

These functions can be fulfilled by standard IEC products, accompanied by appropriate certifications.

Combination Starters

Combination Starters are the most common type of packaged motor starter. They are called "Combination" because of their structure and their combined functions. The figure opposite shows the four combined functions that constitute a complete motor starter circuit, defined as a "Motor branch circuit" by the NEC (US National Electric Code) in article 430. Standard UL508 currently gives different types of combination starter that meet the requirements of a "Motor branch circuit".

Type E, called "**self-protected combination starter**", covers all these functions and can be controlled manually (thermal-magnetic circuit breaker) or remotely (starter-controller). Type E starters withstand faults within their declared nominal rating without sustaining damage, after which they can be put back into service. In addition, they can withstand more severe short-circuit and durability performance tests without welding or excessive wear of the contact tips.

Type F, called "**Combination motor starter**", consists of a type E manual starter (thermal-magnetic circuit breaker) combined with a contactor. These starters are evaluated by means of basic short-circuit tests, but are not considered as "self-protected".

For this combination, the type E starter must be marked "Combination Motor Controller when used with ...", followed by the reference of the load side contactor.

⁽¹⁾ **UL**: Underwriters Laboratories, **CSA**: Canadian Standards Association, **ACNE**: Association of Standardization and Certification, **NEC**: National Electric Code, **CEC**: Canadian Electrical Code, **MEC**: Mexican Electrical Code.

⁽²⁾ **Canena**: Council for Harmonization of Electrotechnical Standardization of North America.

⁽³⁾ **IEC**: International Electrotechnical Commission.

Control panels

To help users properly coordinate their motor control equipment with their distribution system in the event of a fault, article 409 of the 2005 NEC requires panel builders to list the short-circuit withstand rating of their motor control panels. According to standard UL508A, manufacturers must use the short-circuit withstand value of the lowest rated device as the nominal withstand rating of the panel, unless the devices have been tested together for a higher coordinated rating. The minimum “**short-circuit current rating**” (SCCR), on motor control components for horsepower ratings of 50 hp or below is 5000 A.

Using a **type E** or **type F** combination starter eliminates the coordination problems of using individual components for the “motor branch circuit protection”, “motor controller” and “motor overload protection” functions. The panel builder uses the declared short-circuit current rating for the combination starter. This value is generally higher than 5000 A. This makes it easier to list the short-circuit current ratings and to check the compatibility of a UL508A motor control panel within a given distribution system.

Group protection

Article 430.53 of the NEC allows a single short-circuit protection device to be used for more than one motor circuit if the components used are marked and listed for such use.

Components suitable for use in group protection, known as “**motor group installations**”, can be marked in one of the following two ways:

Case n° 1

The contactor and the motor overload relay are both listed as suitable for group installation.

An inverse time circuit breaker can be used as the short-circuit protection device if it is also listed as suitable for group installation.

The panel builder must therefore make sure that the short-circuit protection device selected (fuses or inverse time circuit breaker) does not exceed the value allowed by article 430.40 for the smallest overload relay used in the circuit.

Once these conditions have been met, the panel builder can reduce the size of the conductor connecting the short-circuit protection device to the individual motor contactor/overload relay, to one third of the size of the upstream circuit conductor supplying the protection device.

The panel builder must limit the length of the motor starter conductor (connecting the short-circuit protection device to the motor contactor/overload relay) to a maximum of 7.6 m (25 feet).

Case n° 2

The motor contactor and overload relay are listed as suitable for “**tap conductor protection**” in group installations.

This category allows the panel designer to reduce the size of the conductor connecting the short-circuit protection device to the individual motor contactor/overload relay, to one tenth of the size of the upstream circuit conductor supplying the protection device.

The designer must limit the length of this conductor to a maximum of 3.05 m (10 feet).

In both cases, the supply circuits must not be less than 125 % of the connected motor FLA (Full Load Amps) rating.

For panel builders, using **type F** combination starters in group installations simplifies group motor considerations.

Each starter is a fully coordinated motor branch circuit.

The panel builder follows the same NEC requirements for sizing the supply conductors as those required for single motor branch circuits.

The size of the supply conductors can be reduced in accordance with the specifications of article 430.28.

This allows the same flexibility in conductor sizing as that offered in article 430.53 (D), without a requirement to check the short-circuit protection rating marked on the components and the overload relay limit.

A UL508A panel does not need a short-circuit protection device when each motor starter installed is a **type F**.

The upstream short-circuit protection device supplying the starter protects the panel. The panel builder only has to consider the panel/enclosure disconnect requirements specified by the NEC or local codes.
